ALLIANCE TV PRODUCTS

ALLIANCE TENNA-ROTORS

ALLIANCE TENNA-ROTOR

The Alliance Tenna-Rotor, available in three models illustrated below, is a TV or FM antenna rotator. Designed to rotate all conventional type antennas. It consists of a fully enclosed electrically driven rotor into which the antenna center-post is clamped. Four-conductor "zip" cable connects rotator with plastic control case placed near receiver, which plugs into any 60 cycle 110-volt AC house circuit. A selector switch controls rotation clockwise or counter-clockwise to point antenna in any direction for optimum reception.

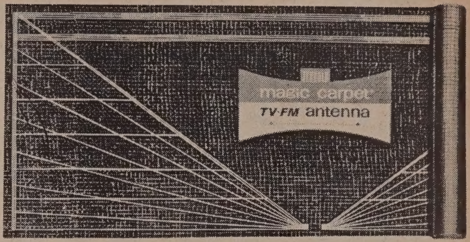
JERROLD

TV RECEPTION AIDS FOR THE HOME

JERROLD MAGIC CARPET* ANTENNA

THE INDOOR ANTENNA WITH OUTDOOR PERFORMANCE

MODEL MK-1



This new antenna by Jerrold is the first full-scale printed-circuit antenna. Truly a "Magic Carpet" carrying quality TV/FM signals to receivers in the home, the MK-1 is easily installed (lay it on any flat, horizontal surface in the attic, under a rug, or staple to a ceiling) and simple to orientate (shift its position for best reception). Ideal for use with the Jerrold Amplified TV/FM Home System, the Magic Carpet eliminates the unsightliness and maintenance costs of outdoor antennas. When properly installed, the Magic Carpet provides reception comparable to an outdoor, conical-type antenna mounted in the same location. This means that the MK-1 will provide excellent reception of TV stations within a 30-mile radius and of FM stations within a much greater radius. The antenna is shipped complete with 6 plastic strap insulators (Model HS-36) and 25 feet of twin-lead for attachment to a home amplifier or to a TV receiver. Shipping Weight — 1¾ lbs.
List Price $9.95

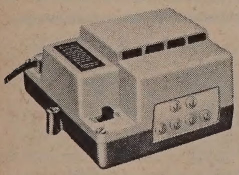
NEW TV/FM AMPLIFIED COUPLERS

MODEL HSA-43 (FOR 3 SETS)



The new JERROLD amplified, 3-set coupler, Model HSA-43, employs a single 6DJ8 tube to provide 5 db minimum gain from two outlets and unity gain from the other. It is ideal for operating 2 TV and 1 FM receivers from a common antenna. The HSA-43 amplified coupler operates on an input as low as 100 microvolts and has an excellent noise figure. The input and output impedance of 300 ohms permit the use of twin-lead in installation. This compact (4½" x 4½" x 3") rugged unit is powered from 117 V 60 cycle ac, consumes only 10 watts and incorporates "no-strip" twin-lead terminals. Shipping weight — 1¼ lbs. UL Approved. List Price $29.95

MODEL HSA-44 (FOR 4 SETS)

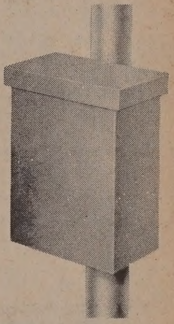
Similar to the HSA-43 but serves up to four TV/FM sets with a minimum of 1½ db gain at each output. List Price $29.95

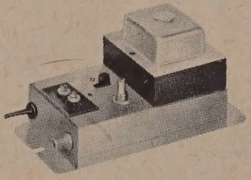
Note: Where desired, use Jerrold's no-strip twin-lead outlets to create convenient plug-in locations.

NEW PRE-AMPLIFIER

THE DE-SNOWER TV/FM PRE-AMPLIFIER

MODEL DSA-202 WITH REMOTE POWER SUPPLY 407-P





MODEL DSA-202

The new TV/FM pre-amplifier, Model DSA-202 uses only two tubes to provide high gain (20 db) for the entire TV band. In addition, it provides 8 db minimum gain at 108 mcs., the extreme edge of the FM band. Complete with a new remote power supply (Model 407-P) this pre-amplifier features an even better noise figure than the famous DSA-132 and consumes only 25 watts. The new remote power supply provides 22 to 27 v ac in logarithmic steps. Ideal for fringe areas where "snow-free" TV pictures and "hiss-free" FM sound is desired.

See "DESNOWER" PRE-AMPLIFIERS on page 39 for complete specifications. List Price $79.95

DESCRIPTION

The JERROLD Home System is a completely new innovation in supplying exceptional quality television and FM signals to a number of receivers located anywhere in the home. This is the first truly engineered, amplified system designed especially for the home.

The Home System consists of a low-noise, high output amplifier that permits clear reception of VHF television and FM radio signals in both fringe and metropolitan areas. AM reception is included by utilizing one side of the distribution wiring as an efficient AM antenna. The amplifier distributes the TV and FM signals throughout the house over regular twin-lead. Connection to the twin-lead is made by a special tap unit. A quick disconnect press-on plug is supplied for connecting the antenna terminals of each receiver to any of the tap units. This feature allows any receiver to be moved from room-to-room . . . receivers are no longer tied down.

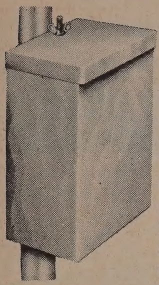
"DE-SNOWER" PREAMPLIFIERS



JERROLD "DE-SNOWER" preamplifiers, Models DSA-202, DSA-132, and DSA-*, produce "snow-free" pictures from extremely weak signals. The new DSA-202 and the DSA-FM greatly improve reception of weak or noisy FM stations and provide reception of distant FM stations not normally received. These mast-mounted preamplifiers bring your TV-FM tuner to the antenna thus overcoming noise pick-up and losses due to antenna lead-ins. Each is equipped with a remote power supply which may be placed at an easily accessible location. Only one cable is necessary to carry ac power up to the preamplifier and amplified signal down to the receiver. Used as a preamplifier, the low noise figure and high gain of DSA amplifiers will improve color TV reception and boost TV/FM signal strengths in all fringe areas. See specifications chart for prices. All prices include remote power supply.

FM RANGE EXTENDER MODEL 406A-FM

This FM pre-amplifier has the same electrical specifications as the DSA-FM except that it has a self-contained power supply. Designed for indoor mounting, the 406A-FM operates from any 60 cycle, 117-volt ac source. The physical appearance and shipping weight are the same as those for the 406A pre-amplifier listed on page 40 of this catalogue.

UL Approved. List Price $64.25*

"TRAP-EASE"

TUNABLE INTERFERENCE TRAPS

Eliminate adjacent channel interference, permit reception of weak, distant stations normally blocked by a strong local channel.

"TRAP-EASE" KNOCKS OUT ADJACENT CHANNEL INTERFERENCE. This tunable "deep notch" antenna trap (greater than 50 db) permits TV viewers to remove "beat" or "herringbone" patterns caused by adjacent channel sound or video carriers. Permits clear reception of even weak distant stations.

Works with any TV receiver and any 300 ohm antenna that would normally bring in pictures from the distant stations if the interfering adjacent channel was not on the air. Does not affect reception of regularly viewed channels.

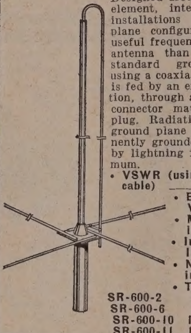
BASE STATION MONOPOLE ANTENNA



Designed around a folded radiating element, intended for service in installations requiring a ground plane configuration and a wider useful frequency range for a single antenna than is possible in the standard ground plane design using a coaxial stub tuner. Antenna is fed by an end seal type termination, through a Type SO.239 female connector mating with a PL.259 plug. Radiating elements and all ground plane elements are permanently grounded, hterefore, damage by lightning is reduced to a minimum.

BT 25 MOBILE P.A. AMPLIFIER

BT25

A product of Bogen research . . . the BT25 is the first commercially available fully transistorized public address amplifier offering 25 watts of power from a 12-volt battery. So versatile it will serve scores of P.A. applications, the amplifier is so small it will fit in the glove compartment of your car.

The BT25 is perfect for use in cars, trucks and busses for regular public address or emergency use. Its hefty 25 watts of power make it ideal for fire department or police use, for disaster work and civil disturbances. It is also recommended for ships, carnivals, electioneering . . . wherever a small, high-powered, reliable P.A. amplifier is needed. Bogen's unique fully transistorized circuitry provides maximum power with minimum battery drain. When operated from a 12-volt battery, the drain is approximately 3 amperes at full output—85% lower than comparable vacuum tube amplifiers. When operated from a 6-volt battery, current drain is only 1.4 amperes at full output. The inputs of the BT25 are individually controllable, permitting mixing. A transistorized circuit insures ruggedness and long, trouble-free service not possible with conventional amplifiers (Bogen guarantees the BT25 for a full year). There are no tubes to burn out, no vibrators to replace. It is completely hum-free.

PORTABLE TRANSCRIPTION AND RECORD PLAYERS HIGH POWER INTERCOM-PAGING SYSTEM

Two New Portable Phonoplayer- P.A. Combinations Feature Continuously Variable Record Speed Control plus 20 and 40 watt Peak Power Amplifiers

Models VP20 and VP40. These outstanding new portable phonoplayer—P.A. combinations are complete, self-contained, high fidelity phonographs with several important functional features. Especially suitable for square dancing, swimming instruction, calisthenics, and other group and school activities, continuously-variable-record-speed-control permits the record tempo to be adjusted to suit the tempo of any activity. The range is from 29 to 86rpm. And there are 'click' positions for normal playing of 16, 33⅓, 45 and 78rpm records. This variable speed adjustment also permits the pitch of any selection to be tuned to the pitch of any musical selection. Another unique feature is the automatic cueing device which automatically raises and lowers the tone arm at any desired position on the record, insuring the gentlest possible contact between stylus and record groove. The turntables are driven by heavy-duty 4-pole induction motors to insure constant speed, once selected, with no detectable rumble, wow or flutter. Turntables will handle discs up to 16 inches in diameter and are supplied with adapters for 'large-hole' 45rpm records. Both models feature inputs for two microphones and tuner to permit use as P.A. and radio amplifiers, also scratch filters, individual bass and treble controls, convenience outlets for auxiliary equipment, and special outputs for use with new speaker-amplifier monitoring package designed for square-dance callers. The VP20 and VP40 are as distinctive for their attractive, modern styling as they are for their versatile utility.

Model VP20 (illustrated) delivers 20 watts of peak power, and is housed in a single portable case with removable cover which serves as the speaker baffle. A heavy-duty 12-inch P.M. loudspeaker is supplied, and 25 feet of speaker cable.

Model VP40 (not shown) with 40 watts peak power is supplied with two heavy-duty 12-inch loudspeakers, and is housed in two matched cases. One contains the phonoplayer and electronic equipment, and the other—a split case—has one loudspeaker in each separable section, and is provided with 25 feet of cable for each speaker.

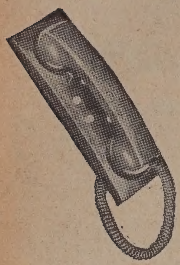
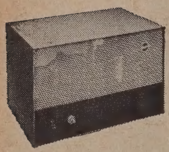
INTERCOMS AND TELEPHONES

BOGEN TQ PHONE SYSTEMS

Feature High Level Intercom and Paging in Addition to Inter-Phone Communication





Basically, a TQ phone system enables you to reach anyone you need—instantly—without interfering with the regular, outside telephone service. You press a selection-button to reach the person you want. Or you may press several buttons for a conference call. No one in your vicinity can hear what is said to you from the other end.

With the Bogen TQ Series phones, you can plan a system with as few as 2 stations. Or you can plan one with up to 7 stations or up to 13 stations. And you can include paging as well as high level intercom through as many as 5 remote-area loudspeakers.

The new functional flexibility of the Bogen phone line meets most of the intercommunication needs arising in industrial plants and in other office and commercial applications.

Planning a Bogen TQ system is as simple as assembling building blocks. You start with the TQ phones—modern instruments, trim and attractively styled in grey plastic. They are designed for use on a desk, counter—or wall mounted.

You can add a TRA Phone-Page Adapter to any TQ-6 or TQ-12 phone system, and extend the versatility of the system through a PA loudspeaker system. Or, you can add the PRS-5 multi-mix Power Adapter and combine the system with a PA Amplifier and up to 5 remote area loudspeakers to provide two important functions in addition to phone intercommunication: (1) high level intercom between any TQ phone and any remote area loudspeaker—replies from vicinity of loudspeaker not requiring use of 'talk-back' switch, and (2) simultaneous paging through all remote area loudspeakers from any TQ phone.

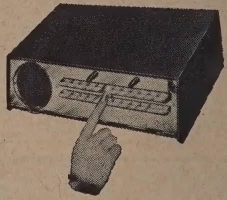
NEW DELUXE ALL-TRANSISTOR BOGEN INTERCOM SERIES TIX and TIS



The many recognized advantages of advanced transistor circuitry will soon be available in the new deluxe Bogen intercom line scheduled for early fall deliveries in 1960. Working prototypes in operation up to the time this catalog went to press reveal many desirable qualities—compactness, extremely low power consumption, freedom from any trace of hum, trouble-free performance without maintenance, and complete elimination of need for tube replacements.

Even the low silhouette styling has captured the spirit of the modern efficiently attractive business office. Even the backs (which face visitors) are finished, free from labels, medallions or other markings. And every worthwhile feature has been included to enhance the versatility of these units.

The TIX Series will consist of two master models: the TIX-11 for systems with up to 11 stations, and the TIX-24 for systems with up to 24 stations. These systems may be all-master . . . single-master/multiple-remote . . . or multiple-master/multiple-remote. TIX stations will be available in satin finished walnut and in vinyl covered steel enclosures.

Among the features included in the TIX master units are: chime and light call signals—conference operation—45-ohm output for long-line applications—optional 'all-call' for paging—and optional use of phone handsets (in remotes as well as masters) for additional privacy.

Two remote stations will be available: The RIX-6 and RIX-1. The RIX-6 has a Master Station Selector Knob with 6 positions and can initiate calls to any of 6 Masters, in addition to being able to receive and respond to calls from all masters. It is ideal for use in multiple-master/multiple-remote systems. The RIX-1 is identical to the RIX-6, except that it can initiate calls to only one master, and is designed for use in single-master/multiple-remote systems.

SPECIAL ACCESSORIES FOR TIX SERIES:

PRS-11 and **PRS-24** Power Supplies for up to 11 and 24 station systems respectively.

ACP-1 All-Call Adapter which permits any master to page all master and remote stations simultaneously.

JB11 and **JB24** Junction Boxes for 11 and 24 station all-master systems.

The TIS Series will consist of two master models: the TIS-11 for systems with up to 11 stations, and the TIS-24 for systems with up to 24 stations. NEW, ALL-TRANSISTOR (16) STEREO TAPE DECK

Provides stereo/mono ¼ track erase, record, and playback; also ½ track stereo/mono playback. Separate record and playback heads and independent record electronics and playback electronics to permit simultaneous stereo playback from tape while recording (monitor). Dual meters for stereo recording. Sound-on-sound recording without changing connections. Separate line and mic (dynamic) mixing level controls in each channel. Tape transport is trouble-free, precision constructed, and supremely rugged. (Only 3 moving links.) Employs heavy-duty hysteresis synchronous capstan motor with heavy precision fly-wheel essential for unvaryingly accurate speed regardless of normal line and load variation. Also, two 4-pole reel motors with positive electro-dynamic braking. Completely electrical push-button control of the transport; solenoid operated pinch roller and tape lifters to provide feather-touch push-button control. Tape lifters remove tape from heads during fast winding to minimize head wear. Precision tape guides eliminate tape weave. Electro-dynamic hold back tension on supply reel, plus mechanical filter for minimum flutter and wow. Transport will handle the thinnest tape without stretching. Convenient sweep loading, top-of-deck speed shift control, and digital counter. No rubber idlers to develop "flats" or mechanical brakes to wear out or go out of adjustment. Deck can be mounted horizontally or vertically.

Speeds: 7½ and 3¾ ips. **Maximum Reel Size:** 7 inches. **Rewind and Fast Forward Time:** 1200 ft. in less than 1 minute. **Flutter and Wow:** 0.2% at 7½ ips, 0.25% at 3¾ ips. **Frequency Response:** 30 to 17,000 cps at 7½ ips, 40 to 15,000 cps at 3¾ ips. **Signal-to-Noise Ratio:** 53 db or better with signal recorded 12 db below saturation at 7½ ips. **Timing Accuracy:** 0.3%. **Dimensions:** 15¼" wide x 13⅜" front-to-back x 7" deep.

STEREO DUAL PREAMP HF85

KIT: $39.95 **WIRED: $64.95**

Offers practically every control and switching facility anyone could want in a physical design adaptable to any type of installation. With it, you can select, preamplify and control accurately, any stereophonic source—tape, discs or broadcasts. Extremely low distortion, bordering on the unmeasurable (even at high output levels), precludes any degradation of quality from the best modern program sources. Self-powered, utilizing a full-wave rectifier tube power supply. Works in conjunction with any two high quality power amplifiers, such as the EICO HF14, HF22, HF30, HF35, HF50 and HF60. Separate low level input in each channel for mag. phono, tape head, and microphone. Separate high level inputs for AM tuner, FM tuner, and FM Multiplex. Also two auxiliary A inputs (one in each channel) and two auxiliary B inputs (one in each channel). Independent level controls that may be operated together with built-in clutch. Independent full-range bass and treble tone controls in each channel, may be operated together with built-in clutch.

Switch permits hearing each stereo channel individually, also use of unit for stereo or monophonic play. Stereo channels may be reversed. On monophonic record playback, channels are mixed for rumble cancellation. 30 db feedback amplifier pair reduces tone control distortion to unmeasurable levels in each section. Low impedance output to tape recorder, useful on all inputs. New "low-silhouette" construction matches EICO tuner. Very attractive when placed on a shelf or out in the open, yet permits easy console installation with full shielding and adaptability to any panel thickness.

100-WATT STEREO DUAL POWER AMPLIFIER HF89

KIT: $99.50 **WIRED: $139.50**

Represents the utmost in audio quality. Each power amplifier is conservatively rated at 50 watts and employs the thoroughly proven cathode-coupled phase inverter-driven circuit, preceded by a direct coupled voltage amplifier. Ultra-linear connected, fixed-biased, push-pull EL34's are used in the output stage and provision is made for both bias and dc balance adjustments. The very low impedance characteristics of silicon diode rectifiers gives the common power supply for the two amplifiers very good regulation. As a result, signal conditions in one amplifier have negligible effects on the operating conditions of the other amplifier. Surgistor limits starting surge currents, insuring long life for the silicon diode rectifiers, electrolytics, and tubes. High circuit and component quality result in less feedback required to achieve the very low distortion figures, so that the HF89 has excellent stability margin.
Output Power: 100 watts (two 50-watt amplifiers) continuous, 200 watts peak. **IM Distortion:** (60 & 7000 cps at 4:1): 0.5% at 100 watts. **Harmonic Distortion:** Less than 0.25% from 30 to 15,000 cps and less than 1% from 20 to 20,000 cps within 1 db of 100 watts. **Frequency Response:** ±0.5 db 5 cps—100 Kc. **Rise Time:** 2.5 μsec. **Square-wave Response:** Essentially undistorted to 20,000 cps. **Inverse Feedback:** 18 db. **Stability Margin:** 13 db. **Damping Factor:** above 12, 20 cps to 20 kc. **Channel separation:** 60 db. **Sensitivity:** 0.55V for full output. **Hum:** Better than 90 db below full output. **Controls:** Level Ch. 1, Level Ch. 2, "Service Selector" switch, ON-OFF switch. **Speaker Connections:** 4, 8, and 16 ohms. **Tubes:** 1—ECC83/12AX7, 2—6SN7GTB, 4—EL34, 2—silicon diode rectifiers (power), 1—selenium rectifier (bias); surgister protected for long life. **Power Source:** 117V, 60 cps. **Power Consumption:** 215 watts at no signal, 270 watts at 100 watts out. **Size:** (HWD) 6" x 15" x 11". **Weight:** 40 lbs.

In walnut or mahogany	$98.50	$112.50

Another EICO first in high fidelity — unusually pure and full reproduction of very deep bass frequencies with normal efficiency in a ducted-port enclosure of only 2¼ cubic feet! Both the HFS3 and HFS4 include a specially designed, bellows-suspension, full-inch excursion Jensen 12" woofer (22 cps res.) and a Jensen 8" mid-range speaker with high internal damping cone for smooth response. A Jensen 3½" cone tweeter is supplied in the HFS3 for those who prefer a softer, more delicate quality in the highs; a Jensen compression-driver horn tweeter is supplied in the HFS4 for those who want more brilliance and greater projection in the highs. (In all other respects, the HFS3 and HFS4 are identical.) Both speaker systems have a system Q of ½ for flattest frequency and best transient responses. Frequency response is essentially uniform (±5 db) 45-14,000 cps. 16 ohms impedance. HWD: 26⅜" x 13⅞" x 14⅝".

2-WAY SPEAKER SYSTEM SEMIKIT HFS5

Complete with factory-constructed enclosure. Easy to assemble—no gluing necessary.

	SEMIKIT	WIRED
In unfinished birch	$47.50	$56.50
In walnut or mahogany	$59.50	$69.50

New techniques in loudspeaker engineering developed by EICO enable this bookshelf-size, 1¼ cubic foot ducted-port enclosure to provide remarkably clean, deep, smooth bass with good efficiency. The HFS5 includes a specially-designed, bellows-suspension ⅝" excursion Jensen 8" woofer (45 cps res.) and a Jensen 3½" closed back tweeter of exceptional quality. The Q of the HFS5 system is ½ so that the speaker is critically damped when used with any modern amplifier of normal damping factor (7-20). Critical damping gives the smoothest possible frequency response and the best transient response. Frequency response is essentially uniform (±5 db) from 52 to 14,000 cps. 16 ohm impedance. HWD: 24" x 12½" x 10".

2-WAY SPEAKER SYSTEM HFS1

Complete with factory-built cabinet

SEMIKIT: $39.95 **WIRED: $47.95**

Cabinet expertly constructed, furniture-quality, tuned-bass-reflex, acoustically engineered by Jensen for the woofer supplied. All visible surfaces smooth-sanded, clear-grained birch hardwood. Heavy-duty 8" Jensen woofer: High energy ½-lb. Alnico 5 DP magnet. Response engineered for smooth cross-over to tweeter at 1800 cps. Jensen tweeter: Compression-driver loaded by cast aluminum Hypex* horn. Small, precisely controlled and loaded diaphragm is free of "breakup" and the accompanying excessive peaks and dips in the frequency response.

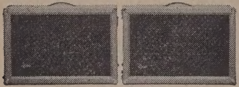
SYSTEM SA-80-C2 consists of one SA-80 Power Amplifier and two Model C-100 Reproducers. Three cases. Weight of complete system —71 pounds. PROFESSIONAL NET: $368.40.

THE MODEL J-200 REPRODUCER is a two-way speaker system—with tweeter level control—enclosed in a highly compact, portable case that uses the latest techniques to provide response previously associated only with large, bulky reproducers. Their conversion efficiency is such that, when a pair is used with the SA-80, they will provide full range, high fidelity reproduction and excellent coverage in school music rooms, small auditoriums, homes, and in most general business and professional applications. Case is plywood, covered with gray fabrikoid to match the SA-80, with hideaway power cord compartment. Corners are protected with metal; grill is perforated metal. Size of each J-200—14¾″ x 20″ x 10¼″. Weight—19½ pounds. PROFESSIONAL NET: $79.50.

THE MODEL C-100 REPRODUCER is identical in dimensions, appearance, and weight to the J-200. However, in the C-100 over-all high efficiency with compactness and light weight has been the leading objective. It performs with quality that compares with—and frequently surpasses—much larger speakers. Provides greater audience coverage than the J-200 or K-400 reproducers but not as much as the L-300. PROFESSIONAL NET: $79.50.



SYSTEM SA-80-L2 is made up of one SA-80 Power Amplifier and two Model L-300 Reproducers. Three cases. Weight of complete system—90 pounds. PROFESSIONAL NET: $448.40

Case is plywood, covered with gray fabrikoid to match the SA-80. Corners are protected with metal; grill is perforated metal. Size of each L-300 is 17⅛″ x 26⅛″ x 9¼″. Weight—29 pounds.

THE MODEL K-400 REPRODUCER is a three-way loudspeaker system developed for those who seek the very best possible reproduction that can be provided by translating advanced engineering concepts into portable form . . . and yet do not need the tremendous conversion efficiency of the L-300. The performance of the K-400 from 25 through 15,000 cycles rivals that of the best "permanent" reproducers of far greater bulk, size, weight, and cost. Case is plywood, covered with gray fabrikoid, has hideaway power cord compartment. Corners are metal-protected; grill is perforated metal. Size of each K-400—16⅞″ x 23½″ x 10¼″. Weight—35 pounds.

No matter what price level . . .

if it's a NEWCOMB,

it's DEPENDABLE!

Sound installations vary greatly in their needs of complexity as well as requirements of cost. Yet, one important feature is required of all —dependability. No matter how complex, or how simple and inexpensive your needs may be . . . you can enjoy utmost dependability by insisting on a Newcomb amplifier for your sound system. No product bears the name Newcomb unless it is inherently dependable, no matter on what price level you find it. Under the Newcomb name there is only one standard for quality . . . *the best!* Newcomb amplifiers vary in their complexity, but never in dependability. Quality of parts, materials or workmanship are never sacrificed here to gain lower price. Lower cost of one Newcomb model as compared to another is always entirely the result of greater simplicity.

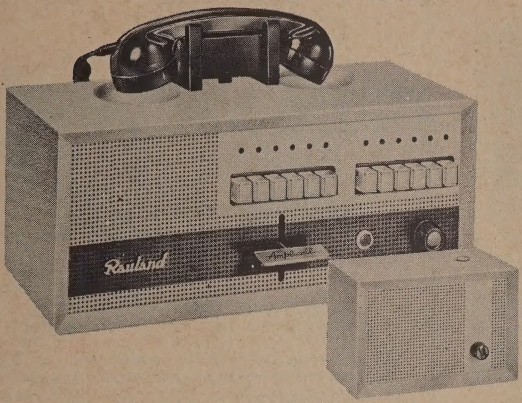
AMPLICALL-INTERCOM SYSTEMS

4400 SERIES AMPLICALL MASTER STATIONS



This Master announces incoming calls by pleasing chime tone instead of voice and registers calls by lights. Operation of the annunciator is automatic, depressing the selector key to answer a call turns off the light above that key. The 4400 series is similar in operation to the 5400 Amplicall but provides the added advantage of light annunciation and chime call. One or two 4400 Masters may be used in a 5400 system to provide light annunciator service for key executives.

The 4400 Master is ideal for use with a large number of speaker stations for busy operations that require registration or "storing" of calls. It is available in 6 or 12 station capacity and the X4018 base adder unit permits expansion up to 30 stations.

Not more than 3 — 4400 Masters should be combined in the same system because of the large number of wires required in Master to Master service. Detailed wiring information for this type circuit, on request.

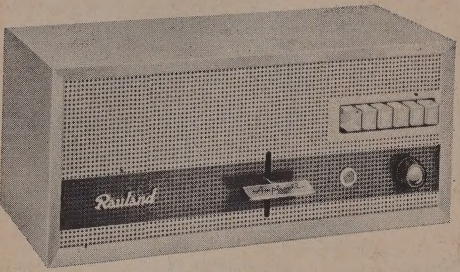
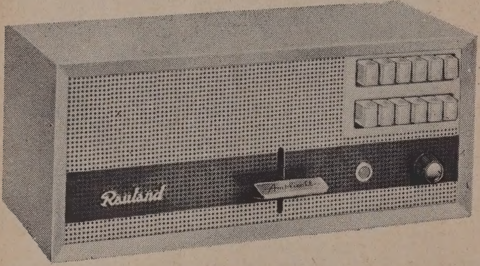
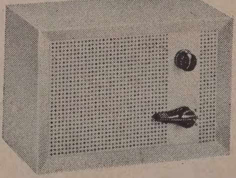
AMPLICALL-INTERCOM SYSTEMS 5400 SERIES



This famous AMPLICALL is a most versatile and flexible intercom system. One Master is used for any combination of Master or speaker stations. It is housed in a modern steel cabinet in rich "office gray" simulated leather finish. Features include 5" speaker-microphone, increased output, special de-basing tone control, switch contacts of solid silver alloy for trouble-free long life, positive busy signal. Masters are plug-in type with 6′ cable, fitting JB116 or JB117 Junction Box.

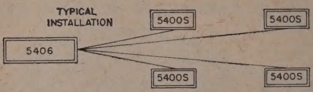


5400 Series Masters are available with 6, 12 or 24 keys, with or without telephone handset. Dimensions are 15¼" wide, 6¾" high, 7" deep. Designed for balanced line operation, 117 Volt AC only.

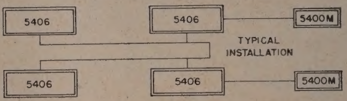


Desk type remote station is 8" wide, 5¼" high, 4½" deep in matching finish. 5400S has call switch and volume control.

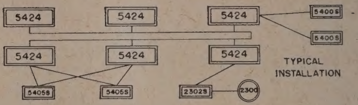
ONE MASTER PROVIDES ANY SERVICE



One 5400 Master is used for two way conversation with up to 24 remote speaker stations. Remotes may answer remotely and may originate calls. Remotes with call switches may talk with each other with T/L switch when connected by the Master station. Remotes may answer a call from the Master without operating switch. Master uses T/L lever on all conversations even when using telephone handset. Use 5400S Remote station, or a 2664D horn and 2302S call switch for noisy areas.



5400 Masters are used for Master to Master service and each Master may have connections to 5400M Remotes. Offers selective privacy and option of chime call instead of voice. Master uses one push button to select "private" or "remote answering" for his location. Masters require CH5 chime, and R54A relay for "remote answering" operation. Remotes may answer their Master, cannot originate call. For remote answering, the calling Master operates the T/L lever. Master can answer call from handset without operating T/L lever.
Remotes may be 5400M, 2664D.



This shows the flexibility of the 5400 Masters, operating in any combination of Masters and Remotes. Remotes may call up to 5 Masters, Masters may listen in on Remotes. Masters have privacy, one or more Masters may select non-private operations, to answer calls remotely without operating T/L lever. Conversations of handset type Master with other Masters or Remotes require use of T/L lever. Several Masters may talk in conference. Remote stations may answer from a distance, and may orginate calls. SW55 originates to up to 5 Masters.

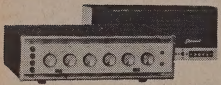
S-360



S-4400

The Model **S-4400** is designed for conversion of monophonic hi-fi to stereo and use with Model **S-360,** basic 36 watt power amplifier to provide 36+36 watt stereo where installation space is limited by a narrow bookshelf, since only the 10½-inch S-4400 need be accessible for operation. The Model S-4400 features the identical controls, front panel, and dual preamplifiers offered in the S-5000 II described above. However, a single 36-watt basic power amplifier is offered instead of the two 36-watt amplifiers included in the S-5000 II. Connection of the S-4400 with any monophonic basic amplifier (such as the S-360) or monophonic amplifier-preamplifier (such as the Sherwood S-1000 II) completes a stereophonic dual preamplifier-amplifier featuring one unified control panel. Specifications same as S-5000 II. Size: 14" x 10½" x 4". Shipping Weight: 24 lbs.

Either model can be converted at any time to a stereo system by the addition of the companion Model S-4400.

- **3 Separate 2-Way Conversations Simultaneously with 6 Master Stations**
- **Selective Paging with Reply**

Provides selective communication. Each Master is equipped with a 6-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 3 separate conversations may be held simultaneously, with 6 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 6 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 6 stations are used, channels must be *shared*; stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

The same station can be "private" to one or more Masters and "non-private" to others, and retain full communication facilities.
- **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, you reply.
- **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.
- **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.
- **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.
- **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.

- **EXTERNAL RELAY CONTROL**—A standard built-in feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. For use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth.
- **RECIPROCAL POWER SUPPLY**—Each Master operates on 110-120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the Masters in the system can operate without being plugged-in.
- **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.

T-HP-3 provides more than twice the volume of universal Staff; T-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.
- **WALL SWITCH**—Combine with TALK-A-PHONE Horn or Hi-Power Staff to add origination-of-call feature.

ATLAS "FULL GRIP—VELVET ACTION" MICROPHONE STANDS

NO SLIPPING — NO RATTLE — NO NOISE — NO SCRATCHING — NO WEAR

The "Full Grip" clutch is standard on all models—it offers an extended length clutch body, permitting a secure, full hand grip. The clutch mechanism of all "Velvet Action" stands is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping or sudden dropping. All chrome plated surfaces are carefully polished prior to plating to assure a uniform "Super-Chrome" wear resistant, lifetime finish. All threads on tube assemblies are individually inspected to assure a perfect fit when assembled to the base castings. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most effective. All bases include self leveling, shock absorbing base pads, plus three additional "anti-tip" points located between the base pads. All models terminate with a ⅝″-27 thread at the microphone end.

MS-10C Economy model suitable for most applications where a low cost stand is required. Offers adequate base stability for average weight microphone.

MS-12C Similar to above but increased base weight offers an added advantage. Flat design of base is modern in appearance and is finished in a dark gun metal shrivel finish. Equipped with base pads to absorb shock.

MS-11C Full chrome design. Entire stand base and upright tube assembly completely finished in "Super-Chrome." Excellent for use where fine appearance is a requirement. An excellent choice for use with full chrome plated microphones. Equipped with base pads.

MS-4 Three section telescoping microphone stand permitting a wide variation of adjustment. Can be adjusted from 26 inches to 61 inches in height. Excellent for use in schools, etc. where it is necessary to adjust the stand over a wide range of height adjustment. Minimum collapsed length offers convenience in transportation.

MS-20 DeLuxe model. Maximum stability suitable for use with heavy, expensive microphones. Large oversize tube assembly, ⅞″ diameter telescoping tube, 1⅛″ diameter base tube, base diameter 12 inches. Oversize clutch assembly assures secure locking adjustment. Top adaptor included for ⅝″-27 microphones.

MS-25 Professional Microphone Stand. The ultimate in microphone stands. Features the "Safety Air Lock Cushion." This sensational feature prevents any accidental or sudden slippage of the telescoping section. If the clutch mechanism is accidently released the stand cannot suddenly crash down—thus prevents damage to the microphone from severe mechanical shock. The telescoping section is at all times "cushioned on air" and the controlled escapement of air will only permit a slow smooth and quiet collapse of the stand. Base finished in a combination of chrome and shrivel. Heavy duty tube assembly, 1⅛″ and ⅞″ combination—⅝″-27 top adaptor.

MS-11S - MS-12S Automatic "Sleeve Action" models. A fully automatic means of adjusting the height of the stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered—cannot change its position without a deliberate pressure on the actuating sleeve control. Two models full chrome base or shrivel finish.

CS-1 Fully collapsible, portable stand quick and simple to set up. Collapsible to a minimum overall length of 23 inches.

CS-42 Collapsible base stand. All the advantages of portable type stand without the loss of stability inherent in cast iron base types. When legs are extened they are securely locked in position. Upright tube assembly full chrome, base finished in grey shrivel, base pads provided. **Packed: One complete stand to a single shipping carton.**

The cable enters under the base at the rear end of the "goose neck" resulting in a neat and workmanlike installation.

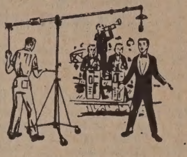
ATLAS BOOM STANDS — ADAPTORS



Atlas Booms have a wide variety of applications, and models are available to meet every possible need. The BS-37 "Porto-Boom" is generally used with film or television cameras. The BS-36 and BS-36W "Professional" are designed for use in recording and radio-broadcast studios—and for special application on band stands, etc. The BB-1 "Baby Boom" is used where only a small amount of overhang is required—over desks and musical instruments, for example.

All models are carefully designed and constructed for noise-free, smooth, "Velvet-Action" adjustment. They can be permanently locked into position at the most suitable mike location.

Atlas Sound Booms clearly reveal engineering know-how based on a thorough knowledge of industry's requirements.

BS-36 Professional Boom Stand with "Safety Air Lock Cushion" offers all the advantages of "Floating Action" plus a secure and dependable locking adjustment. All moving parts are "Velvet Smooth" in operation. The "Safety Air Lock Cushion" built into the vertical section prevents any accidental or sudden slippage of the upright section. The vertical section cannot suddenly crash down for it is "Cushioned on Air" and the controlled escapement of air will permit only a slow smooth and quiet collapse of the upright section. A gyromatic swivel joint is provided at the microphone end of the boom, so that the mike will always hang in proper position. The base casting is equipped with shock absorbent, chrome plated, "domes of silence." These base pads permit the base to glide over floor surfaces with a minimum of friction—also absorb floor vibrations that might otherwise be transmitted to the microphone.

Specifications: Boom length 62″ (an additional 31″ extension may be added if a light weight mike is used). Adjustable vertical extension from 48″ to 72″. Base diameter at floor contact points 17″. All tubular sections super-chrome plated. Modernistic base finished in polished chrome and gun metal. Snap on hangers furnished for holding mike cable to boom. Shipping weight 36 lbs. .... Can be knocked down and reassembled in a few moments—without tools. The telescopic upright is securely locked in position with a large brake shoe type clutch assembly. A piston type air check prevents any accidental collapse of the upright. Dual control microphone "gunning device" is supplied for rotating the mike through a 360° arc. Noise free universal mike suspension can be adjusted for various weight mikes. Automatically positions mike regardless of boom angle. Many extra features too numerous for individual description. DR PROJECTORS—NONRESONANT STURDY WEATHER-PROOF

Atlas DR projectors are the result of many years of acoustic research. This costly engineering and elaborate tooling has resulted in projectors that are without acoustical or mechanical equal. All acoustical sound paths are clean and uniform without steps or pockets to disturb the normal function of the horn. These critical design features eliminate conditions of turbulence, frequency cancellation and resultant signal distortion. All models are equipped with a heavy duty "U" bracket. This bracket is securely fastened to a main body casting which will not fail when subjected to extreme conditions of stress, strain and vibration.

ATLAS PAGING AND TALK BACK SPEAKERS

All New Designs of HU and CJ type speakers are now equipped with the versatile "Versalock" mounting bracket. This new rigid, rugged and reliable bracket is completely adjustable on both a horizontal and vertical plane: Efficient: these speakers are especially efficient in the voice frequency range and provide the extra "punch" that overrides high level background noise. Talk Back: designed to offer a maximum of efficiency in talk back application. The peaked characteristics within the voice frequencies further add to the sensitivity of the speaker as a pickup device. All HU type speakers are constructed of aluminum. All parts are chemically processed prior to final finish in gun metal grey, high gloss, high temperature baked enamel. The CJ type speaker horns are constructed of nonresonant indestructible fiber glass. All models are 100% weatherproof under all climatic conditions.

HU-12N Small in size and low in cost. Excellent for low power paging and talk back systems where limited coverage is required. Ideal as a cone speaker replacement for many inadequate low power inter-com systems. Offers three times the sound level of a small cone type speaker at a given power input. Equipped with the versatile "Versalock" mounting bracket permiting "pin point" directivity adjustment.

HU-15N The "work horse" of paging speakers. By far, the most popular all purpose trouble free speaker of its type and size. Double sealed against weather conditions existing in all climates. Its response is excellent for voice fréquencies and offers natural voice reproduction free from peaks that often cause acoustic feed back and poor intelligibility. "Versalock" bracket standard equipment.

HU-24N Very similar to the model HU-15N except that the air column is extended to improve the low frequency response and overall efficiency. Excellent for paging and talk back system that are also required to reproduce music in industrial and amusement locations. Equipped with "Versalock" bracket.

CJ-14N High efficiency speaker having a one piece outer horn constructed of fiber glass. The rectangular design of the horn opening results in a sound dispersion pattern having a wide horizontal beam, 100% weatherproof. Equipped with "Versalock."

CJ-30N A wide angle speaker of fiber glass construction that confines maximum power to a horizontal plane. The one piece horn completely covers all working parts of the driver unit assuring trouble free service in all climates. The exclusive "Versalock" bracket offers mounting facilities never before available on any speaker.

TP-15N Two way paging speaker offers economical bi-directional sound coverage. Universal mounting permits dual horns to be faced downwards or outwards from a wall surface at a 10° angle. A good choice for long corridors where one driver can do the work of two. Saves on installation costs.

TP-24N Same as above but equipped with over-sized horns offering lower frequency response and added efficiency. 100% weatherproof.

DU-12 The new DéCor Projector combines the intelligibility, directivity and high efficiency of a driver type projector with modern high styling that will harmonize with the most ultra modern décor. Finished in natural brushed satin aluminum. Two way adjustable bracket has a feed thru for connections. All wiring and line matching transformer concealed under canopy. All mounting hardware included for new and existing type installations.

ATLAS TRANSFORMERS—BAFFLES—ACCESSORIES

NEW MODEL DC-5 CONE SPEAKER TYPE "DECOR" PROJCETOR

The new DC-5 fills the long-felt need for a speaker with two desirable features: The small size and fine appearance necessary for the most discriminating applications; and pleasing low level reproduction of both voice and music.

Both of these features, along with many others, are incorporated in the design of the DC-5. The modern, straight-line, lighting fixture contours and the brushed natural aluminum finish are acceptable anywhere. The DC-5 is not obviously a loudspeaker; it does not offend or clash with surroundings, but blends into the background styling in an unobtrusive manner.

The DC-5 is designed around a high quality five-inch cone speaker, and is enclosed in a semidirectional housing. The effective low frequency response, as a result of the cone type reproducer, adds naturalness to voice frequencies and a pleasant timbre to low level musical reproduction.

The semidirectional horn and complete directional control of the mounting bracket permits the sound coverage to be confined to the required service area. It is therefore an excellent speaker for use in churches, funeral homes, hotel lobbies, restaurants and all reasonably quiet areas where appearance and ease of installation must be carefully considered. The DC-5 is semiweatherproof, and will resist dampness and humidity, but is not recommended for completely unsheltered outdoor application.

The "positive lock" bracket permits the speaker to be easily directed either horizontally or vertically. Connections feed thru the bracket, and all wiring, transformers, etc., are concealed behind the canopy. The canopy is equipped with an adaptor strap for an electrical outlet box or for direct mounting on a wall or ceiling surface. All parts are finished in brushed, natural aluminum, followed with a clear lacquer protective coating.

The bracket has a rubberized cork lined channel that slips over the top of the window glass. Raising the window locks it tightly against the top window slot.

Neat in appearance and quickly converts any car into a mobile sound vehicle. All hardware supplied for attaching speaker to the WM-1, constructed for sheet steel, finished in grey enamel ....List Price $5.00

PARAFLEX SPEAKERS BY AUDAX

MODEL A-60M

Featuring Patented Paraflex Foam Suspension. The rim of the cone is joined to the basket by means of a foam compound ring which provides the Audax speaker with 100% greater cone excursion than speakers utilizing conventional corrugated rim mountings. As a result, there is more "bottom" bass, and flatness of output is maintained to extremely low frequencies. Bass is realistic without boom or hang-over, and distortion is reduced to a minimum. Realism is particularly noted in the Audax speaker's ability to handle transients or sudden impulses and percussion sounds.

AUDAX SPEAKER SYSTEMS

AUDAX SPEAKER SYSTEMS In these incomparable systems, Audax Paraflex speakers are housed in completely new type of enclosures reflecting both engineering and style advancements achieved by no other units today! The enclosure operates on a new principle wherein the speakers are located symmetrically on either side of a ducted-slot. The bass output is aided by this mutually loaded slot. The configuration of the slot is such as to present air viscosity to the rear pressures, resulting in damping and suppression of resonance peaks. This method of venting results in smart, clean bass without a trace of boom or unnatural heaviness. These enclosures are specifically designed to bring out the depth and striking realism of the Paraflex high-compliance speaker units. Patent has been applied for. **Impedance: 8 ohms.**

Each enclosure can be fitted with easily attachable chrome satin legs, available from Audax. Model #CA-LC legs. $7.95.

Electro-Voice GENERAL PURPOSE MICROPHONES

UNIDIRECTIONAL LINE MICROPHONE

Model 644 Sound Spot—Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening, making it the most directional microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.

Cancellation from the rear and sides exceeds 20 db giving practically complete rejection of unwanted sound. This feature gives the most rejection of random noise in any microphone commercially available. Reverberation and feedback are vastly lower than any other microphone, allowing much greater leeway in loudspeaker placement.

The effective front acceptance angle is 45° each side of center giving best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than all other microphones.

Frequency response is smooth from 40 to 12,000 cps. High output: −53 db. Dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure diecast zinc with ¾" aluminum tube. Rear diameter $2\frac{5}{16}$", length 16". Cable is 18'. Weight, 2 lbs. 9 oz. List Price.................**$110.00**

PROJECTOR HORNS

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

Exclusive compound horns permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area for uniform coverage. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

Model FC100—Similar to the famous CDP, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn, or concentrating high-frequency horn (HC1000) can be substituted for small diffraction horn. Large horn is of fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 cps. Mouth size, 10½" x 20½", depth (less driver), 20". Net Wt. (less driver), 10¾ lbs. Shpg. Wt.. 12¾ lbs. List. **$50.00**

Model AC100—Concentrating version of CDP. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Diffraction high-frequency horn (HD1000) can be substituted for concentrating horn for flexible coverage control. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 cps. Diameter, 21"; depth (less driver), 21"; Net Wt. (less driver), 11 lbs. 6 oz. Shpg. Wt., 13½ lbs. List Price........................ **$47.00**

Model HD1000—Diffraction horn for converting AC100 to wide-angle (60° x 120°) coverage above 1,000 cps. Shipping Weight, 1½ lbs. List Price..................... **$6.00**

Model HC1000—Concentrating horn for converting FC100 to concentrated (30°) coverage above 1,000 cps. Shipping Weight, 4 lbs. List Price........................ **$10.00**

New reentrant horns provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die cast mounting plate plus precision die cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1⅜"-18 threads.

Model FR150—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1⅜"-18 thread. Specifications: Low-frequency cut-off, 150 cps; taper, 150 cps; air column length, 45"; sound distribution, 70° x 100°; mouth size, 10½" x 20½"; depth (less driver), 21"; Net Wt. (less driver), 9½ lbs. Shpg. Wt., 12 lbs. List. **$39.00**

Model AR150—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber-edge damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1⅜"-18 thread. Specifications: Low-frequency horn—cut-off, 150 cps; taper, 150 cps; air column length, 41"; sound distribution, 85°; diameter, 21"; depth (less driver), 17". Net Weight (less driver), 6½ lbs. Shipping Weight, 8 lbs. List Price.............. **$34.00**

VERSATILE CONVERTIBLE DRIVERS

Now, for the first time, here are drivers that can be used interchangeably in compound or reentrant horns. Used on either type of horn, the new Electro-Voice Convertible Drivers feature highest efficiency available. Increased power handling plus extra increased efficiency make the 40 and 50-watt drivers uniquely useful where high power at minimum cost is essential. The high efficiency of all E-V Convertible Drivers is achieved without resorting to "peaked" response which may increase loudness, but does reduce intelligibility. The smooth response of these drivers insures most natural reproduction of voice and music for more satisfying quality with vastly reduced feedback problems and greatly increased tonal range. Double flux ceramic magnets provide long-lasting high efficiency in entirely new low-loss magnetic circuits. Edgewise-wound ribbon voice coils give 18% more energy.

The drivers are rugged and weatherproof; conversion to either reentrant or compound use can be made instantly in the field. Voice coils are also field replaceable, thus reducing repair costs to a minimum. E-V Convertible Drivers are available with 16 or 45-ohm voice coils or with built-in 70.7-volt line constant voltage transformers. This entirely new design concept gives better performance at minimum cost, making E-V Drivers your best buy.

NEW HYPEX* LIFETIME DRIVER UNITS

The new Jensen Hypex* Lifetime Driver Units have many new features which contribute to increased performance and reliability. Frequency range is based on achieving substantially higher conversion efficiency, higher power ratings and improved reliability over comparable units previously available, while affording good fidelity in the reproduction of speech and music. Lower cutoff frequency is somewhat below those of the horns with which they will be used; the specifications show the maximum upper limiting frequencies, but response has been shaped to give emphasis to the 3-5 kc region, which is extremely important in high efficiency sound projection. As a result of these design choices and special research on ruggedization, the D-30 can be rated at 30 watts speech and music, D-40 at 40 watts, and a **Lifetime Guarantee extended against failure under normal conditions of use!**

The DD-100 100-watt Superpower Driver Unit, similarly guaranteed, is the first double acting integrated sound chamber driver unit ever to be offered; it is also the first 100 watt unit available, achieving a higher power input rating to a single projector or an array, than has ever been possible before.

Magnetic structures are the most efficient that research has been able to develop, yielding the highest magnetic energy from the generous sized Alnico V magnets which scientific proportioning of magnet material and soft iron structure can provide. Specially shaped reinforced plastic diaphragms combine ruggedness with excellent acoustic properties and freedom from "breakup". Voice Coils are varnish wound, baked and aged on treated, heat and moisture resistant bobbins, resulting in a rigid assembly that is indestructible in normal service. Beryllium copper leads are indefinitely fatigue-resistant. Models D-40 and DD-100 have precision self-centering moving system assemblies which are added insurance for dependability under severe operating conditions. External leads connect to heavy binder screw terminals; added reliability for wiring is provided by strain reliefs on all units. All units are threaded 1 3/8″-18.

JENSEN COMPLETE HYPEX* PROJECTORS

HF-100 WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty 8″ "woofer" feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit.

Horn outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester in matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

Jensen VH-91A and VR-11 Hypex* projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico V magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

MODEL VH-91A HYPEX* PROJECTOR

Equipped with new universal mounting bracket for adjustment in any direction and secure locking with a single wing nut. Extremely rigid vibration-proof clamping allows three hole flange mounting on flat surface, single hole mounting with 1/4″ lag or machine screw through center, or mounting on top of standard 1/2″ pipe

MODEL VR-11 HYPEX* RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves outward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3″. Fits all Jensen driver units and horns.

NEW JENSEN HYPEX* PROJECTOR HORNS

These new projector horns are acoustically coordinated in design for best performance with Hypex* Driver Units D-30, D-40 and DD-100, any one of which may be used on any of the horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant baked tan enamel finish. Horns are threaded 1⅜"-18 and may be used with any driver units with this thread. Sturdy steel mounting "U" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunnion clutches.

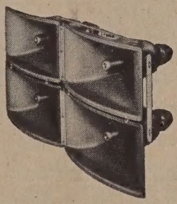
MODEL RT-20 RECTANGULAR HORN

These versatile new horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 5' 9½", giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°



Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

Jensen Professional Series

TWO-WAY AND THREE-WAY UNITARY HIGH FIDELITY LOUDSPEAKERS

These outstanding unitary two-way and three-way loudspeakers have been especially designed for institutional, industrial and commercial sound systems where high fidelity music and realistic voice reproduction are essential. They may be mounted in proscenium arch or underneath a canopy; flush or in small enclosures on walls; in large or small cabinets. In enclosures they may stand on floor or be suspended overhead for large audience coverage. In wide angle coverage of entire frequency range and in sound quality, they are markedly superior to projector type speakers. Ideal for school rooms, auditoriums, arenas and the like.

Moving systems and other parts have been moisture-proofed so that they are highly satisfactory for protected outdoor service where not directly exposed to rain, sleet, or snow. Durable finishes and materials are used throughout. Construction is rugged to insure trouble-free performance indefinitely. Terminals are provided for insertion of fixed or adjustable pads if desired (not furnished—see control listings) in the "tweeter" circuits. All units have full dividing networks (mounted on housing in H-525C and H-225C). Input terminals are screwdriver type. Housing finish is baked tan enamel; horns, etc., at the front of the units are finished in black enamel for minimum visibility through grille cloth. All units are thoroughly dustproofed.

These units incorporate Alnico 5 magnets in highly efficient conservatively designed magnetic structures. Table shows loudness efficiency relative to Model H-225C.

EXTENDED RANGE HIGH FIDELITY LOUDSPEAKERS

Here is a complete line of loudspeakers of latest designs especially for commercial and general purpose applications, all field tested for the exacting and rigorous requirements of professional service. There is a loudspeaker for every need—ruggedly dependable units which have enjoyed the position of "world's quality standard" for many years in the professional field.

These heavy duty loudspeakers are of the extended range high fidelity type with performance suitable for applications where two-way and three-way speakers are not needed. High efficiency is assured with carefully designed magnetic structures using Alnico 5 magnets and ample soft iron circuits. Moisture-resistant cones and other materials contribute to long life expectancy. The units are especially suitable for protected outdoor locations not directly exposed to rain, sleet and snow, as well as for indoor use.

Extended h-f range insures excellent music reproduction. The l-f range will depend on the enclosure size and design. Commonly used in small enclosures or ceiling baffles. Models P8-SC and P12-SC are practically standard in the industry for interior low level music distribution systems.

Sizes from 4" to 15" offer the best performance possible in each size and cost class. Choices as to efficiency and power ratings are available in some sizes. Relative loudness efficiency is shown in the table referred to the P4-VC. A speaker with relative loudness efficiency of +3 db will be noticeably louder than the P4-VC for the same power; only one-half the power will be required to be equally as loud as the P4-VC.

GENERAL DESCRIPTION

The Karlson enclosures are designed and perfected to meet the requirements for the latest and most advanced stereosonic techniques. They provide highly effective acoustic transformers improving the bass, transient response, dispersion, dynamic range, and definition far beyond the ordinary capacities of your speaker. They have consistently outclassed all other approaches in their ability to satisfy the most discriminating. As a result they are without a doubt the most highly recommended loudspeaker enclosures available at any price. Unexcelled for stereo use. Will outperform systems many times their size.

RELATIVE SIZES AND APPLICATIONS

KARLSON '15'—Enclosures for 15" Speakers

33" high, 22½" wide, 18" deep, wt. 80 lbs.
This is the outstanding choice of the real experts. Better bass than even a horn 30 feet long with a 12½ foot mouth diameter—PLUS—unexcelled tonal definition and wide area presentation makes this the finest enclosure available at any price. Use for finest home and professional stereo and monophonic high fidelity systems. Excellent for electronic organs, musical instruments, theatres, studio monitors, music festivals and wherever the very best is required.

KARLSON '12'—Enclosures for 12" Speakers

24¾" high, 16¾" wide, 13¾" deep, wt. 44 lbs.
This enclosure is ideal for those who want the biggest and best stereo sound available in a compact system. Its dynamic range in bass is only slightly less than the Karlson '15' and certainly much greater than mammoth systems costing many times more. Very efficient, doesn't need super power amplifiers for good bass. Suitable for almost all types of installation, including built-ins due to their small size.

KARLSON '8'—Enclosures for 8" Speakers

17¼", wide 11¾", high 10" deep, wt. 14 lbs.
These very small enclosures will actually fit in the average bookshelf, and will give a quality of reproduction and extended bass totally beyond the normal capabilities of a one cubic foot enclosure. Especially good for the small apartment, den or playroom or as an addition to your larger system. May be built into other cabinetry or used as a portable system as well. Provides professional quality at competitive prices.

SPECIFICATIONS AND FEATURES

All Karlson enclosures employ the basically new Karlson acoustic transducer (Pat. nos. 2,816,619 and 2,896,736) for greatly extended bass, ultra-uniform wide angle dispersion for all speakers in excess of 120°, and highly improved transient response, efficiency, dynamic range and signal definition. Cone break up and distortion is practically eliminated. Amplifier loading is resistive giving excellent control. Dynamic range in bass varies with size, with the larger units quite capable of filling the largest auditoriums with sound. High frequency response only limited by tweeter used. No tuning required with any speaker.

All enclosures may be mounted either vertically or on side with suitable loose footing provided for the Karlson '15' and '12' enclosures.

SELECTING A SPEAKER

The Karlson enclosures are designed for use with the finest extended range, coaxial, and triaxial speakers. Works best with high compliance speakers having a good linear suspension, strong magnets and smooth very extended tweeters. Separate tweeters may be mounted in the larger enclosures. Mechanical resonance not critical, no tuning is required.

These new, unusual additions to the Lowell line of speaker baffles are top quality heavy 18 gauge spun aluminum in a buffed satin finish. Designing assures controlled 360° dispersion of undistorted sound. Echo and feedback are at the minimum. Louvres and conical diffuser "float" on very small soft rubber grommets. Baffles are coated with clear lacquer which also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request.

Shipped complete with hardware and instructions for mounting to Lowell Protective Speaker Enclosures illustrated.

From architecture to acoustics, Lowell STL series meets every requirement — in ultra-modern design . . . for even, undistorted low-level sound distribution throughout 360°. Recommended baffle placement is usually 25' from center to axis. Where straight line placement is impossible, triangulating the baffles in the ceiling is highly effective.

Top quality, heavy gauge satin finished spun aluminum. Assures controlled 360° diffusion of undistorted "ear-level" sound with minimum of echo and feedback. Conical diffuser "floats" on soft rubber grommets forming a press fit to aluminum support studs which thread to speaker housing ring. Clear lacquer coating also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request. Shipped complete with hardware for mounting to Lowell Protective Speaker Enclosures illustrated.

360° Coverage Low "Ear-Level" Sound

Even undistorted sound. Recommended baffle placement 25' from center of axis. Where straight line placement is impossible, triangulating baffle in ceiling is highly effective.

The Lowell Model PBA HIFILITE Baffle is constructed of heavy gauge spun aluminum. Upper dome section of the baffle is completely lined with heavy ¾″ jute and waterproofed. At the top of the dome, a beautiful, decorative cast gold eagle adds to the lamp post version of this baffle. The lower section of baffle is a modified version of the Lowell STL baffle. The unit is supported by a heavy 8′ iron pipe, 2″ in diameter. Four ½″ steel tubes support the baffle and provide concealment for speaker wires.

Colors: Midnight black or gold.

The Lowell Model PBW and Model PBG are generally the same as the round HIFILITE models described above. They are available in the square styles pictured here, and the round model shown above. Performance is the same as the popular PBA HIFILITE.

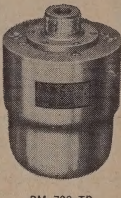
PM 615



PM 708 TR

These four units employ Alnico V magnets and Armco magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphgrams and formers are supplied. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

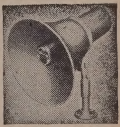
NEW PAGING AND TALK-BACK SPEAKERS

RE-20 — Model RE-20 has a nominal rating of 25 watts and incorporates a varnish vacuum impregnated transformer provided with a removable weatherproof aluminum spinning. Primary impedances are 625, 1250, 2500 and 5000 ohms and the secondary is tapped at 4, 8, and 16 ohms. By connecting directly to and between these terminals, the resulting impedances of 310, 625, 1250, 2500, 3650, 5000, 7300, 10,000, 14,500 and 29,000 ohms are equivalent to 16, 8, 4, 2, 1.3, 1.0, 0.7, 0.5, 0.34 and 0.17 watts respectively when connected across a 70 volt line. Weatherproof construction throughout.



MODEL RE-20, RE-11

RE-11 — Similar to the RE-20, but has a higher cutoff and a nominal rating of 10 watts. The built-in 10 watt transformer has primary impedances of 500, 1000, 1500 and 2000 ohms and a secondary tapped at 8 and 15 ohms.

RE-18 — This is the economical answer to all paging and "talk-back" applications where low to medium power levels are necessary and where "specs" do not call for line transformers. Bell and back cover are integrally spun of aluminum to assure weatherproof performance of the 10 watt driver unit. Complete with adjustable "U" bracket.

THERE'S AN **irish** TAPE FOR EVERY RECORDING REQUIREMENT

Whatever the application—professional sound recording...broadcasting...hi-fi in the home...school or office use...science and industry—there is an **irish** tape that meets every requirement in quality, dependability and value.

the **irish** BRAND FERRO-SHEEN *process*

A mirror smooth surface tape
An exclusive **irish** development
The *ferro-sheen* process offers *five* major benefits over conventional magnetic tapes

1. ULTIMATE IN HIGH FREQUENCY RESPONSE. Due to intimacy of contact between tape and heads, frequency response is ultimate in first play. Conventional tapes must be "worn-in" by usage to approach *ferro-sheen* performance.

2. MINIMUM HEAD WEAR. The mirror smooth surface of **irish** tape reduces head wear considerably below that of ordinary rough surface tapes.

3. FREEDOM FROM HEAD CONTAMINATION. **irish** tape has the most homogeneously bonded oxide of any magnetic tape. NO external lubricant is needed as ample lubricant is built into the oxide. This right combination of the right ingredients reduces oxide and lubricant build-up on heads to an absolute minimum.

4. LOWEST MODULATION NOISE. The ultra smooth *ferro-sheen* magnetic surface of **irish** tape assures significantly lower modulation noise.

5. MINIMUM DROP-OUTS. The remarkable *ferro-sheen* process produces a superior tape with maximum freedom from drop-outs.

irish *ferro-sheen* tape is the *best engineered* tape in the world.

A bold new design concept in tape recorders that retains the traditional high quality of Presto equipment and adds to it a versatility that results in greater efficiency and economy than has ever before been available.

All series 800 recorders accept standard tape reels and core winds up to 10½″, and operate at 7½ and 15 ips or 3¾ and 7½ ips. Speed accuracy is ±3 seconds/30 minutes. CAPPSCUTTERS

Patent No. 2187512 and 2530284

CAPPS CUTTERS are the finest examples of precision hand craftsmanship available in this country today. Each one is made by a series of hand shaping and polishing operations on delicate facets so small that they can be covered by a human hair. Each is individually disc tested to assure the highest possible recording standards. PRODUCTION TOLERANCES: Included angle-Plus 7, minus 3 degrees: Radius, plus or minus .0003: Burnishing facet, plus or minus .00025 (measured at radius tip): Noise meter reading of minus 55db or better at an 8" record diameter.

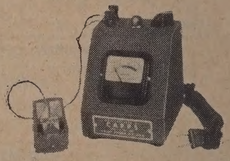
CUSTOM MADE AND SPECIAL DESIGN STYLI AVAILABLE (MRS, ANM and FEATHER EDGE)

Eccentric styli, Advance balls, Shaving knives, Wax points, Embossing styli, Replaceable Sapphire reproducing needles, Cartridge assemblies with Sapphire points.

CAPPS RESHARPENING SERVICE

Most CAPPS MADE styli can be resharpened upwards of five times depending on whether they are simply dull or badly chipped (Thermo styli cannot be resharpened this many times because of the wiring which limits the available area of sapphire.) CAPPS "RESHARPS" are given the same exacting care and attention as CAPPS new styli and are returned to the sender promptly.

HOT STYLUS UNIT



The CAPPS HOT STYLUS UNIT is used for applying heat to disk recording styli, softening the disk material at the point of contact thereby producing smoother more accurate grooves. This results in a substantial reduction in surface noise, especially at the inner diameter and minimizes the mechanical load on the cutting head increasing its efficiency and frequency response.

When ordering specify make and model number of cutter head and stylus requirements.

In the design and manufacture of the UNIPOISE tone arm, Pickering and Co. has achieved the highest standards of engineering and craftsmanship. A precision instrument, the UNIPOISE employs a single friction-free pivot bearing for almost-infinite freedom to trace precisely the delicate more-difficult-to-track groove of stereo records. The complete assembly — tone arm and pickup — is only a fraction of the weight of conventional tone arms. Introduced for conventional records only a short time ago, the UNIPOISE was originally designed to make precise and reproducible record measurements in calibrating recording channels and record masters . . . an exclusive feature that is tailor-made and ideally suited for the new and exciting stereo records. This advanced mechanical design and functional styling combine to provide the finest phonograph reproducer ever made . . . for all micro-groove records . . . monophonic and stereophonic! For use with all high quality transcription turntables its practical size permits installation into areas only slightly larger than that required for record changers . . . it will mount on a motorboard measuring only 15½" x 15½". Simple unimount installation, employs a single thumbscrew and bolt. Exclusive arm rest with soft sable brush to keep the stylus tip free of dust at all times. Convenient stylus force adjustment.

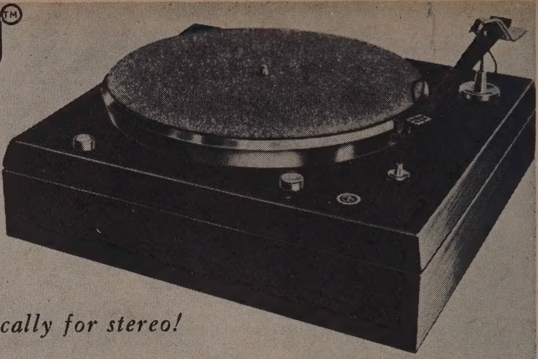
The Gyropoise 800™ airborne Stereotable™



The first really new idea in turntable design in 75 years...specifically for stereo!

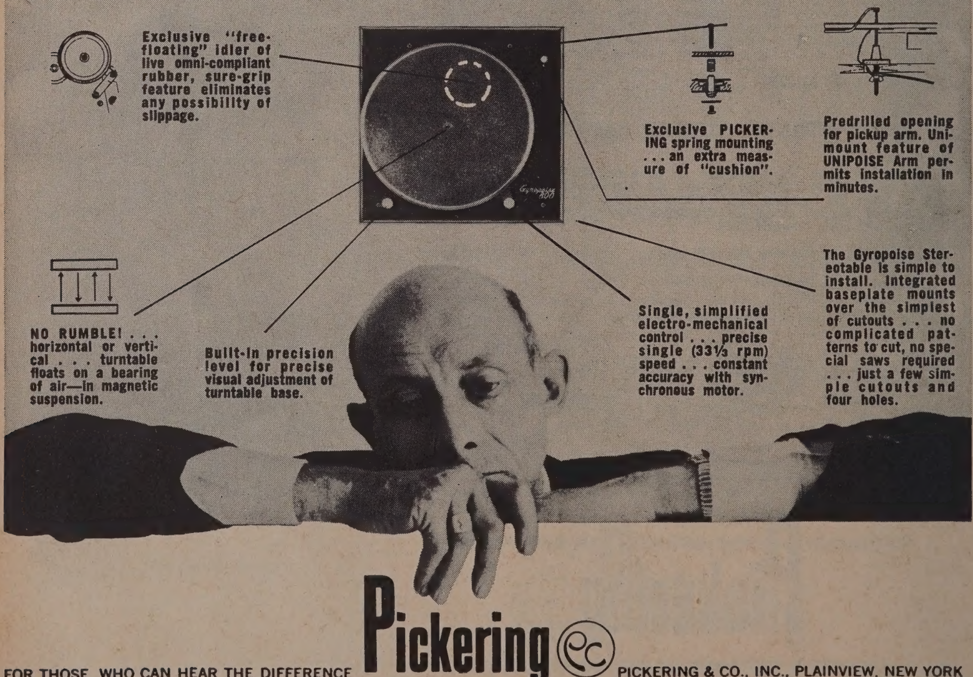
With conventional LP records, rumble, a form of distortion caused by mechanical vibration in a turntable mechanism, is a minor problem. The motion of a conventional stylus is lateral and a conventional cartridge is designed to generate a signal voltage only when activated by lateral motion without responding to any vertical movement of the stylus. With the stereo cartridge the motion of the stylus is complex . . . it is lateral, vertical and a combination of both lateral and vertical, depending upon the recorded material. Therefore, vertical vibration is a serious problem when playing stereo records . . . this vibration is picked up by the cartridge and is heard as a distortion that sounds exactly as the name implies — rumble!

Vertical rumble — regarded by engineers as a major handicap in stereo record reproduction — is not a problem with the Gyropoise 800 Stereotable. Only the Gyropoise revolves with precise accuracy in magnetic suspension, on a bearing-of-air — void of stiff mechanical linkage inherent in conventional turntables.

Designed specifically for microgroove records . . . monophonic and stereophonic . . . the **Gyropoise 800 Stereotable** is single speed at 33⅓ rpm and employs a built-in precision leveling adjustment with indicator. The Stereotable which embodies a unique magnetic suspension, is an exclusive invention of Pickering & Company (patents are pending and all rights are reserved). Vertical period of spring suspension is below 5 cps; compound vertical rumble attenuation is 12 db per octave below resonance. Weight: 9 lbs. chassis only; 13 lbs. with complete base. Measures 13½" x 13½" — 1⅝" above and 3" below the 5/32" thick base plate. Overall dimensions on complete base: 14¾" x 14¾" x 5⅜" high.

Model 800C Gyropoise Stereotable, chassis only —	**$66.00**
Model 800CB Complete Base (available in blond, mahogany, or walnut) —	**15.00**

GYROPOISE AND STEREOTABLE ARE TRADE MARKS USED TO DENOTE THE QUALITY OF PICKERING & CO. INVENTIONS



Exclusive "free-floating" idler of live omni-compliant rubber, sure-grip feature eliminates any possibility of slippage.

Exclusive PICKERING spring mounting . . . an extra measure of "cushion".

Predrilled opening for pickup arm. Unimount feature of UNIPOISE Arm permits installation in minutes.

The Gyropoise Stereotable is simple to install. Integrated baseplate mounts over the simplest of cutouts . . . no complicated patterns to cut, no special saws required . . . just a few simple cutouts and four holes.

NO RUMBLE! . . . horizontal or vertical . . . turntable floats on a bearing of air—in magnetic suspension.

Built-in precision level for precise visual adjustment of turntable base.

Single, simplified electro-mechanical control . . . precise single (33⅓ rpm) speed . . . constant accuracy with synchronous motor.

16"... ...PRECISION TURNTABLE

The MODEL B-16H *3 Speeds*

Offers the broadcaster and recording studio the finest professional performance at the lowest cost. The turntable itself is precision lathe-turned, non-magnetic, cast aluminum – and with an extra-heavy rim for effective balanced flywheel action. Turntable diameter is standardized at 15¾ inches to allow a ⅛-inch overhang for cueing. It is internally rim-driven by means of neoprene compound idlers. All inter-moving parts are hardened and ground to a micro finish. Rotates on a single-ball pivot which takes the entire thrust of the turntable shaft.

Extremely low distortion has been achieved through effective acoustical damping – through special attention to motor bearings, motor suspension, idler design, concentricity of pulleys and all the other elements essential to smoothness, quiet and overall quality of performance. Rumble, wow and flutter and speed regulation are well within NARTB standards. Requiring no more than routine maintenance, all parts are readily and easily accessible.

Robins Gibson Girl® Tape Splicers are the accepted standard of the professional and industrial users of recording tape. They have gained this reputation because of their ease and reliability of operation, high standards of workmanship. They are the only splicers which actually cut a diagonal lap joint in the tape and trim the splicing tape and tape edges with an indented trim cut, making **"THE SPLICE WITH THE GIBSON GIRL® SHAPE".**

The slight "waists" formed in the tape prevent adhesive from contacting critical parts of the recording mechanism and prevent layer to layer adhesion. Adhesive deposited on tape guides, etc. is a frequent cause of wow, flutter, and erratic performance.

Gibson Girl® Tape Splicers are Available in Six Models.

GIBSON GIRL® "TS4A" • SERIES MAKES PROFESSIONAL SPLICES IN SECONDS!

*New! With Replaceable Cutter Cartridge

High Quality Grampian Disc Cutterheads & DP4 Microphone

Grampian Feedback Cutterhead — Type B 1/D

The Grampian B 1/D Feedback Cutterhead, made in London, England is an improved version of the well-known BBC system. This superb cutterhead embodies an internal feedback winding which reduces distortion, flattens frequency response, and stabilizes operation over long periods of time and widely varying environmental conditions. Because it is damped through use of silicone damping fluid (Dow-Corning 200) with a leak-proof seal, temperature and age will not affect it, thus assuring constant performance.

Quality Construction

The Cutter is of the iron vane, balanced armature type. Simplicity of construction makes it a rugged device; there are no springs nor balances to get out of adjustment. A cutaway view is included to show the essential parts of the head.

The ends of the armature "A" (shown separately in the cutaway view) are clamped between two U-shaped steel yokes "B", within which lie two Ticonal magnets "C" and the laminated pole-pieces "D", with their brass clamping blocks "E". The metal at the bottom of the slots at either end of the armature is shaped to form torsion bars which support the active center portion of the armature in the gap between the pole pieces. To avoid trouble with non-axial deflections, these torsion bars are made as short as possible, consistent with reasonable stress at maximum excursion. Through the center of one of the torsion bars passes the long plain shank of the cutter clamping screw "F"; the thread is carried in an external block "G". The shank has a high torsional compliance so that the presence of the clamping screw does not add appreciably to the mechanical impedance of the armature. The coil "H" lies in the slots in the faces of the pole-pieces, and within the main winding is a second coil which connects to the cathodes of the second stage of a recording amplifier to provide negative feedback. The method of damping the mechanical resonance of the armature (around 10 KC) is to introduce a Silicone Damping Fluid into the air gaps between the armature "A" and the pole-pieces "D". Silicone is unique in that it alone has the property of maintaining a constant viscosity over a wide temperature variation and length of service. Tests conducted with the cutter proved that the change in level covering a temperature range of 60°F. to 110°F. is no more than 1 db. Heating up of the drive coil, as well as heat transmission from a Thermo-Stylus assembly, had little or no effect. The head will fit any standard lathe and is lightweight to reduce cutter bounce (marbleized effect on discs). The front plate cover is tapped to accommodate an adapter for use with heated stylus (sold as necessary) and the chuck fits standard short-shank styli.

Grampian Magnetic Cutterhead — Type C (Non-feedback)

Grampian Type C cutterheads are a development from our feedback cutterhead and have similar mechanical and electrical constants but are operated from a single winding. They may be used in conjunction with any high grade power amplifier.

Quality Construction

The cutterheads are of the balanced armature type, the resonant frequency of the armature being about 9 Kc. This high resonance is achieved by using an armature of pivotless design, the usual pivots being replaced by hollow torsion bars. Since the resonance is so high, the frequency response is fairly flat between 500 c/s to 4,000 c/s, thus making the sensitivity independent of acetate loading, especially when using "hot" stylus technique. The main resonance of the system is damped by the use of Silicone fluid. Contrary to rubber or plastic damping materials, Silicone fluid remains virtually unaffected by changes of temperature.

The price paid for the advantages of the high resonance condition is the increase in the stiffness of the system thus requiring more power to drive it. However, present day techniques make it relatively simple to achieve high power outputs from audio amplifiers with low distortion, and it is recommended that the cutterhead be used in conjunction with an amplifier capable of providing at least 25W output at low distortion.

While normal recording levels may be obtained with an input of 6 watts approx., a much higher peak power is required to deal with transient sounds and the rising frequency response necessary with present day recording characteristics.

An average peak level of 7 volts is required for normal 78 r.p.m. recordings and 3-4 volts for L.P. recordings. Grampian non-feedback cutterheads are available for vertical or horizontal mounting.

TECHNICAL DATA

SENSITIVITY—3 volts input for 1 cm/sec. at 78 R.P.M.

IMPEDANCE—15 ohms at 1000 c/s.

FREQUENCY RESPONSE—± 3 db — 50 c/s to 10 Kc. — 6 db at 20 Kc.

DISTORTION—2% at 1000 c/s.

WEIGHT—6½ ozs.

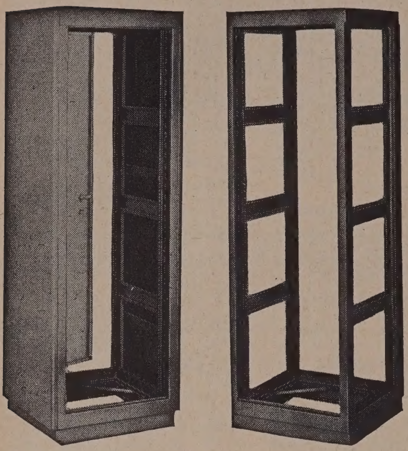
UPRIGHT CABINET RACKS



We have been searching for the answers to the problems arising from new developments in the field of electronics. These call for advance design and it was necessary for us to move into the science of ergonomics to fill the demand of this field. Ergonomics is the science of designing objects with particular reference to the needs and physical characteristics of their users. This has been known as human engineering. We have had to go even a step further in this field by designing enclosures that not only care for human needs, but for the physical needs of the components that will find their way to usefulness while housed in the new Bud Series Sixty Cabinet Racks.

While intricacies of design often add to confusion, the opposite has been the case in this creation. Not only is the Series Sixty the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system, but it is also extremely economical for the user. The units are shipped completely assembled and ready for immediate use.

The basic frame is welded into a solid unit composed of 14 gauge cold rolled steel channels. The sides have "U" braces with perforated channels to which vertical adjustable mounting rails are fastened. In addition to a normal panel mounting, these rails are designed to support other types of equipment such as brackets, shelves, slides, etc. This eliminates any necessity of drilling holes in the sides of the cabinet rack or destroying the fine symmetry of appearance.

The sides and rear door are made of 16 gauge steel. The door may be mounted to open from left or from the right. A six inch wide vertical channel is welded to the door as a strengthening device preventing excessive vibration or whip.

Two pairs of panel mounting rails are standard equipment and they are fully adjustable. Panels may be mounted in the front and the rear at the same time. The front rails are drilled and tapped 10-32 W.E. spacing. The rear rails are drilled adhering to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in our Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door may be easily installed. See them in the Bud section of this catalog.

WE CANNOT TOO GREATLY EMPHASIZE THE FACT THAT THE FURNISHING OF THESE ENCLOSURES COMPLETELY ASSEMBLED AND READY FOR USE ELIMINATES ALL CHANCES OF ERROR IN ORDERING OF MULTIPLE COMPONENTS AND THE TIME AND COST OF COMPLETING THE ASSEMBLY.

The standard finishes are smooth baked enamel over a prime finish, a choice of two tone grey or two tone blue is available. Please designate by the suffix "SG" if grey is required, or "SB" if blue is required.

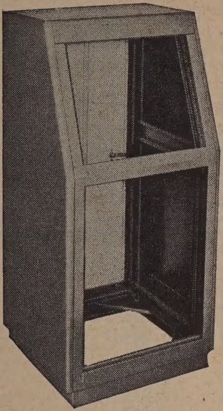
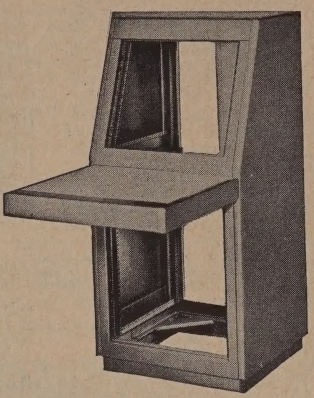
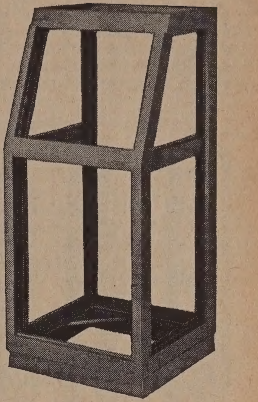
SERIES SIXTY

INCLINED PANEL CABINET RACKS







The Series Sixty Inclined Cabinet Racks have the same basic design features as the Series Sixty Upright units. Nothing is sacrificed to provide strength and convenience while cost is kept to a minimum.

Three standard sizes are available.

THESE INCLINED PANEL CABINET RACKS ARE FURNISHED COMPLETELY ASSEMBLED AND READY FOR USE ELIMINATING THE POSSIBILITY OF ERROR IN ORDERING MULTIPLE COMPONENTS AND LOSS OF TIME AND MONEY IN COMPLETING THE ASSEMBLY.

Three sets of panel mounting rails are furnished and are adjustable from front to rear at both vertical and inclined sections. THIS IS THE ONLY CABINET RACK WITH ADJUSTABLE PANEL MOUNTING RAILS IN THE INCLINED SECTION. Panels may be installed in both front and rear. Front rails are drilled and tapped 10-32 W.E. spacing. The rear rails are drilled to conform with universal spacing. The basic frame is welded into a solid unit composed of 14 gauge cold rolled steel channels. The sides have "U" braces with perforated channels to which vertical adjustable mounting rails are fastened. In addition to a normal panel mounting, these rails are designed to support other types of equipment such as brackets, shelves, slides, etc. This eliminates any necessity of drilling holes in the sides of the cabinet rack or destroying the fine symmetry of appearance.

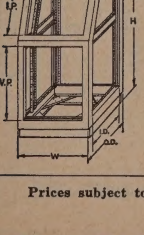
The sides and rear door are made of 16 gauge steel. The door may be mounted to open from left or from the right. A six inch wide vertical channel is welded to the door as a strengthening device preventing excessive vibration or whip.

The inclined portion is slanted at 20° off vertical for comfortable viewing of instrumentation.

The overall design of this series is such that any enclosure can be combined with one or more upright or inclined panel units in our Add-A-Rack system to create a rigid, homogeneous battery. Such accessories as turrets, drawers, desk tops, slides, sloping panel supports and front doors can be quickly installed and are found in the Bud Section in this same catalog.

These units are furnished in two tone grey and two tone blue. The sides, top and bottom section are in dark grey or dark blue smooth enamel. Doors are furnished in a light tone of the same finish. When ordering these units, please specify by use of suffix "SG" for the gray and "SB" for blue.

Standard Bud relay rack panels are available for the Series Sixty racks in light gray and light blue. When ordering panels please add suffix "SG" for gray and "SB" for blue. See Bud page 10.



Regularly furnished with plain sides, plain rear door and solid top. Accessories such as plain or louvred front doors, plain or louvred rear doors, plain or louvred sides and perforated top are available. See Bud Bulletin S-6060.

ADD-A-RACK SERIES

It always has been necessary to buy special racks without louvres on one side to obtain maximum interior space with minimum of floor space. Now, you no longer need to buy an entire new cabinet when you want additional space. When multiple rack units are required, we not only offer additional racks at a lower cost, but provide a sturdier, better looking assembly. Only Add-A-Rack series can accomplish this savings.

Illustration A shows the two Add-A-Rack cabinets assembled together. Illustration B shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entirely new outfit, you purchase, as a unit, four parts: 1. The door, 2. the top, 3. the bottom, 4. an Add-A-Rack Coupling Unit. The right or left side of your present relay rack is removed and replaced by the Add-A-Rack Coupling Unit. Next, the top and bottom are fastened into place. The side taken from the first rack is then fastened onto the second rack. Place the additional door into position and you now have two racks, properly and efficiently coupled together. In the same simple way, more racks can be added at any time. Every one will be in a continuous one piece assembly.

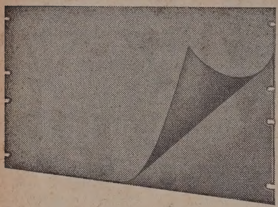
"SURFACE SHIELD" ALUMINUM PANELS



Now . . . naturally bright aluminum panels with blemish-free mill finish.

Each panel is covered on both sides with sturdy self-stick paper to protect against damage. The paper provides an excellent surface for indicating size and position of drilling or milling. These operations may then be done while the paper is still in place thus minimizing the possibility of surface damage and elimination or surface soil. Paper is not removed until the panel is ready for installation.

Panels available in both 1/8″ and 3/16″ thicknesses, have standard notching and are 19″ wide. Individually wrapped in heavy Kraft-backed cellulose wadding for protection in shipment or storage.

"PRESTIGE" VERSA-CABINETS

MODERN STYLING . . . VERSATILE USAGE . . . QUICK ACCESSIBILITY

A standard Prestige Versa-Cabinet consists of the framework, two ball cornered sides, perforated metal back, solid bottom plate and two supporting channels.

The front, back, top, bottom may be quickly removed for access to interior for easy servicing.

Standard 19" panels may be attached to the top, bottom, front or back of cabinet to provide complete closure.

An opening is provided across bottom of back for cable leads, controls or knobs. Size of opening is 1-3/4" x 19". Bud Steel Panel PS-1250 (shown on Bud Page 10) or Aluminum Panel PA-1101 (shown on Bud Page 10) may be used to close opening if desired. Perforated back may be removed and a standard steel or aluminum panel may be used to close back opening entirely.

Sides are attached by means of holding flanges on the bottom of the frame and nut at top.

Handles may be fastened to sides. When the unit is carried by handles, the design of the flange mounting distributes the weight properly for safe carrying. Flange design eliminates possibility of sides becoming accidently detached while equipment is being carried. Cabinets may be fastened side-to-side in batteries of two or more or may be stacked one on another. Proper provision is made for fastening cabinets together either vertically or horizontally by means of four holes on each side and four holes in top and bottom of frame.

Four rubber feet are regularly supplied to prevent marring of the surface upon which cabinet may be placed.

Finished in grey hammertone.

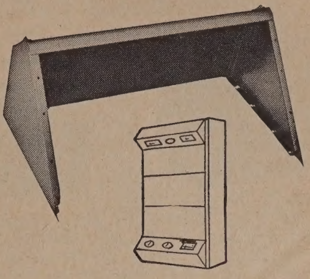
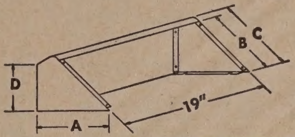
PANEL SUPPORTS-MINIBOXES

DUAL-VIEW PANEL SUPPORTS





Designed for installation on a rack where an oblique view of an instrument panel is desired. ENGINEERED SO THAT THE ENTIRE ASSEMBLY OCCUPIES NO MORE SPACE THAN THE SIZE OF THE SUPPORTED PANEL. For instance, IP-1120 supports a 7" panel and requires only 7" of rack panel space while the IP-1121 supports a 10½" panel and requires only 10½" of rack panel space. An additional feature is the panel support cover which can be removed for easy servicing or installation of instruments.

The Dual-View Panel Support is made of heavy gauge steel. It has attractive contoured edges. Furnished knocked-down with necessary assembly hardware. No panel furnished. Bud panels to fit these supports are PS-1253 (steel) and PA-1104 (aluminum) for IP-1120. PS-1255 (steel) and PA-1106 (aluminum) for IP-1121. Choice of Gray Wrinkle, Black Wrinkle or Gray Hammertone finish. Please specify when ordering.

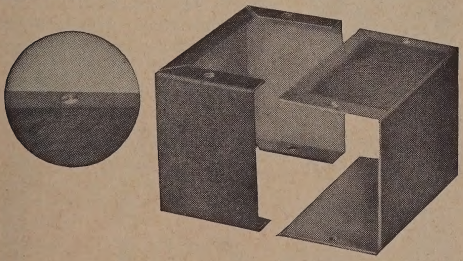
MINIBOXES with SELECTIVE FASTENING



For the first time—a minibox with both snap-lock and screw-type fastening at no extra charge.

A multipurpose aluminum box for use in the fields of communications and electronics. The design permits the installation of more components than is possible in other conventionally designed boxes of the same size.

Two-piece construction, each piece forming three sides. The two sections are held together by the engagement of four circular projections into four matching holes.

A unique mechanical principle enables these projections to be easily and quickly knocked out if screw type assembly is desired.

Flanges assure proper shielding. Four self-tapping screws furnished. Smaller sizes made of .040 aluminum. Larger sizes made of .051 aluminum. Available in natural finish or light gray hammertone.

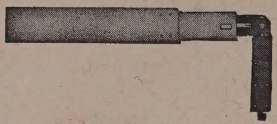
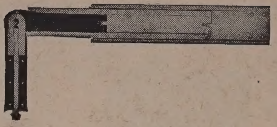
CHASSIS SLIDES





The quality of a slide assembly is determined by the efficiency of operation under difficult conditions. The new Bud line of quality ball bearing slides is designed to give the highest possible serviceability under the aforementioned conditions.

It pays to buy a top quality precision slide to assure smoothest operation and long life over a period of repeated movements of the slide mechanism. Actually, money is saved when breakdown time of equipment is reduced by your ability to quickly withdraw the operating mechanism from an enclosure by means of a thoroughly dependable slide assembly.

All of the Bud slides shown are specifically designed to allow withdrawal of a full 17" wide chassis when this is housed in a standard 19" panel space relay rack or cabinet. All slides are drilled to accommodate either a panel rail bracket or direct slide rail mounting. Mounting brackets and necessary hardware for mounting to standard relay racks are furnished at no extra charge.

Investigation of the mechanisms used will immediately show the Bud slides to provide the most flexible methods of moving equipment of all types from enclosures to access areas where maintenance can be easily affected. In those described below as "quick detach" models, immediate change of instrumentation or other equipment can be made directly at the point of use with an infinitesimal delay in exchange.

You will note that the Bud line is divided into two types. The "SI" line is for industrial or military uses where exceptional use requirements or adherence to Mil specifications is necessary. The "SC" line is specifically designed for those commercial applications where top quality and performance is required, but Mil specs are not a consideration.

"SC" SERIES*

SC-4312, SC-4316, SC-4320 Full ball bearing slides. Inner members do not disconnect or tilt. Aluminum extrusions used on these slides are made of 2014T6 per QQ-A-261. Precision broached for smooth, flawless operation.

SC-4412, SC-4416, SC-4420 Same type as SC-4312 except outer track is full ball bearing and inner track is dry lubricated friction type. Has quick detach facility and locks in the extended position.

SC-4512, SC-4516, SC-4520 Full ball bearing, quick detach, tilting type slides with a lock performing when in extended position. These units permit the chassis to be tilted 90° above and 90° below horizontal position in 45° increments.

*Load ratings on this series are conservative and a plus factor of at least 2 to 1 can be expected when used under normal conditions.

"SI" SERIES**

This series slide channels are aluminum extrusions made from 7075T6 per QQ-A-277 to afford the greatest possible strength. All component parts such as locking devices, stop pins, etc. are made from 302 stainless steel per Mil-S-5059A. The ball bearings are 440 stainless steel per QQ-S-763. All aluminum parts are anodized per Mil-A-8625A and stainless steel parts passivated per Mil-S-5002. The lubricant used is hi-low temperature grease per Mil-G-3278. SI-4212, SI-4216, SI-4220. Full ball bearing slides. SI-4012, SI-4016, SI-4020. Outer track is full ball bearing and inner track is dry lubricated friction type. Have quick disconnect feature and lock in extended position.

SI-4112, SI-4116, SI-4120. Same as SI-4012 except with quick disconnect and locking features, but in addition has tilting action which permits chassis to be tilted 90° above and 90° below horizontal position in 45° increments.

**Load rating on this series is most conservative and a plus factor or at least 3 to 1 can be expected under normal conditions.

SPECIAL SHEET METAL FABRICATION

Bud Radio, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added, departments have been modernized and streamlined, and new methods have been developed.

We make over four hundred different sheet metal products as stock items, which are illustrated elsewhere in this section. Often a slight change in one of our standard items will eliminate the necessity of special tools and dies, thereby reducing costs greatly. Since we produce thousands of sheet metal products, every month, for ourselves and for leading firms throughout the country, we are able to effect economies in production which mean lower prices and faster delivery. Our expanded facilities, expert workmanship, years of experience and manufacturing "know how" assure high quality products. In addition, our Engineering Staff is always available for consultation and advice. We suggest that you send us your blueprints for estimate or consult your nearest Bud Distributor.

Whether the quantity be one, ten, one hundred, one thousand or many thousands, we are interested in the opportunity to be of service to you.

Illustrated on this page are a few examples of specially fabricated sheet metal products.

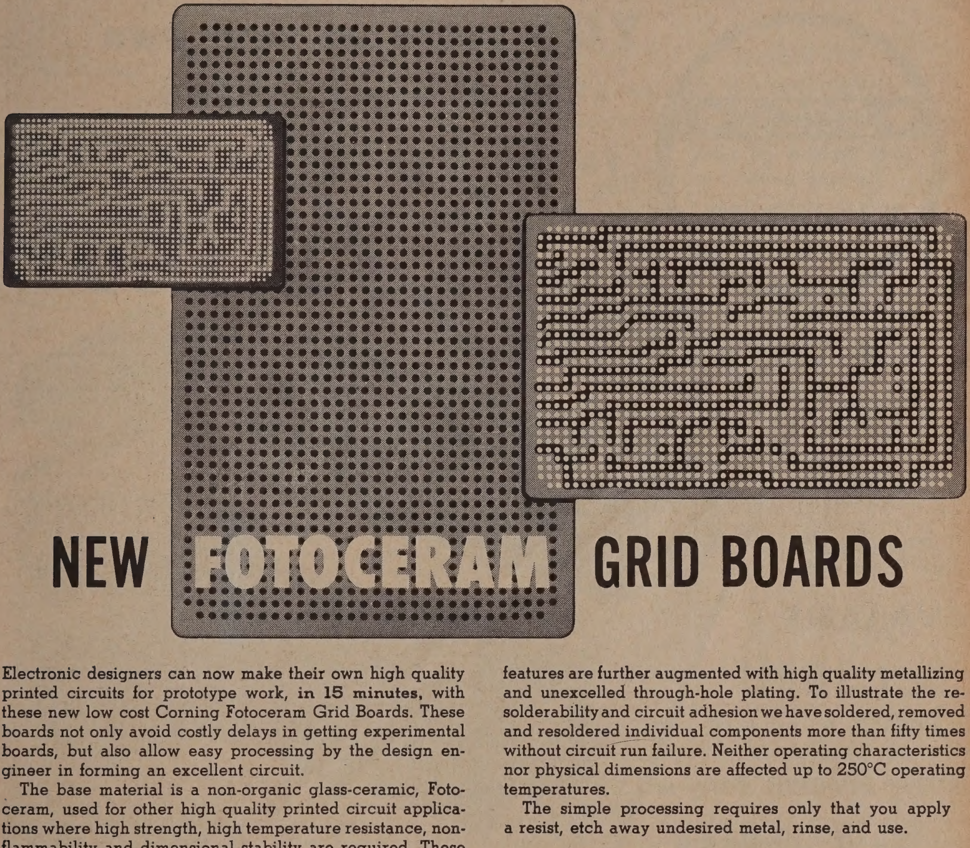
CORNING FOTOCERAM PRINTED CIRCUIT GRID BOARDS



Electronic designers can now make their own high quality printed circuits for prototype work, in **15 minutes**, with these new low cost Corning Fotoceram Grid Boards. These boards not only avoid costly delays in getting experimental boards, but also allow easy processing by the design engineer in forming an excellent circuit.

The base material is a non-organic glass-ceramic, Fotoceram, used for other high quality printed circuit applications where high strength, high temperature resistance, nonflammability and dimensional stability are required. These features are further augmented with high quality metallizing and unexcelled through-hole plating. To illustrate the resolderability and circuit adhesion we have soldered, removed and resoldered individual components more than fifty times without circuit run failure. Neither operating characteristics nor physical dimensions are affected up to 250°C operating temperatures.

The simple processing requires only that you apply a resist, etch away undesired metal, rinse, and use.

CHARACTERISTICS

MATERIAL	Corning Fotoceram, completely copper clad before processing. Copper plated over base electroless copper—**no adhesives used.**
PROTECTIVE COATING	Water dip lacquer applied to prevent copper oxidation before processing.

LMB
PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVER AS ORIGINATED BY LMB

Built with the new original LMB popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

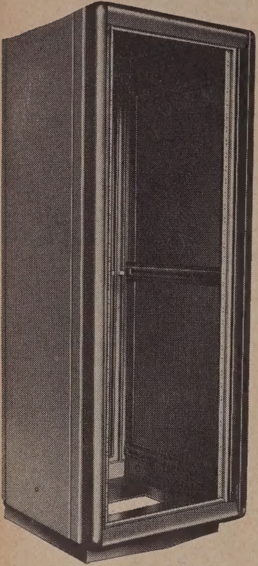
PAR-METAL UNIVERSAL CABINET RACKS



SERIES "PL" and "FL"
De Luxe racks with
detachable side panels.

General Description

Our line of universal cabinet racks has been augmented to include a deluxe series "PL", which brings you a new trend in cabinet design, and permits a wider range of modular assemblies to meet your individual requirements.

Although smartly styled, there has been no sacrifice in the rugged construction which features all universal type racks. The same sturdy frame which is used in our "PR" series provides a solid foundation for maximum loading under severe conditions. Series "PL" is particularly adapted for modular assemblies and may be combined with our console units listed on PAR-METAL Pages 10 to 15 to solve your equipment housing problems. Several typical examples are shown on PAR-METAL Page 11.

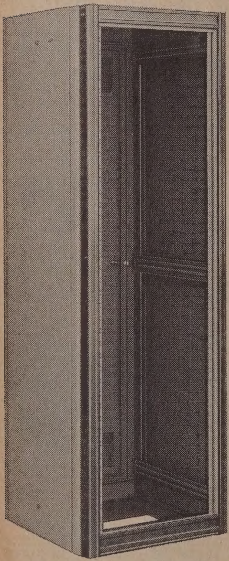
Except where needed for purposes of adjustment or accessibility, every cabinet rack is securely welded into an integral unit. No metal screws, clips, or similar devices are used. Every care has been taken to facilitate your assembly problems with a minimum of parts, an efficient utilization of space, and rapid accessibility to interior components.

RECESSED BASES (shown on illustration at left) are purchased separately as an optional accessory for all universal type racks.

MODULAR GROUPS: All models may be joined into modular groups; cabinets of the same height, in varying panel widths, **with and without front doors**, may be intermixed; Series "PL" and "FL" racks may be combined with our console units.

DIMENSIONS: Racks are available for 19″, 24″, or 30″ wide panels. Cabinet heights are 48⅛″, 67⅜″ 77⅛″ and 83⅛″; depths available are 18″ or 24″.

DESIGN: All sizes listed may be obtained with conventional solid side walls, or with open side walls and detachable side panels. Side shields for use between racks are also available.



SERIES "PR" and "FR"
racks with detachable
side panels.

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

VERTICAL SIDE SUPPORTS: These supports provide a new method for supporting chassis and other equipment in the racks. Installing brackets or shelves is now a simple procedure; the means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical side supports also facilitate the installation of special sliding devices obtainable from slide manufacturers.

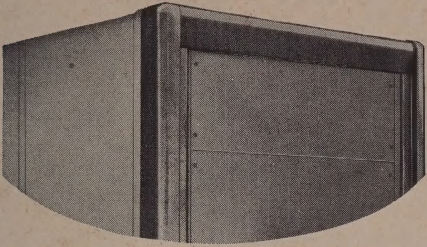
SLIDING SHELVES AND DRAWERS: Several models are listed on PAR-METAL Page 9. These are constructed for mounting on the front of the racks the same as regular panels.

SLOPING INSTRUMENT PANELS and EXTENSION DESK TABLES for single and modular assemblies are available for all universal racks.

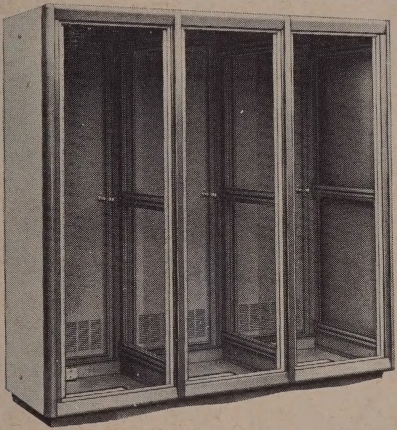
SERIES "PX and "FX"
racks with solid
side walls.

PAR-METAL UNIVERSAL CABINET RACKS

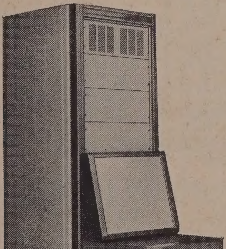
Below are close-up views of the new styling used on our universal cabinet racks. Illustrations of typical assemblies of these racks are shown with additional accessories now available. All racks and accessories may be obtained for 19", 24", and 30" wide panels. On Par-Metal Page 11, you will find additional photographs showing how our "PL" series DeLuxe racks may be combined with console units in modular groups.



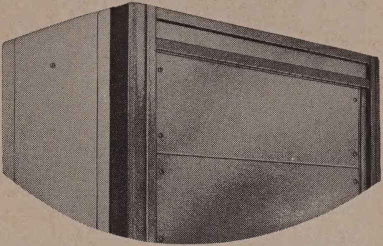
A new concept in modern styling features our series "FL" and "PL" cabinet racks listed on Par-Metal Page 5.



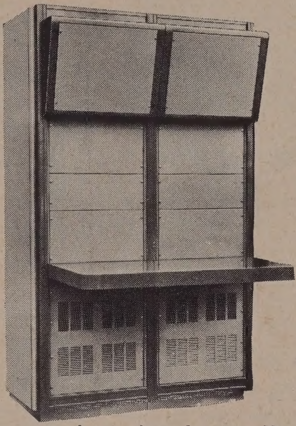
Illustrated above is a modular group of three No. PL-7724 Racks with sub-bases. They are available in various heights for panels 19", 24", and 30" wide.



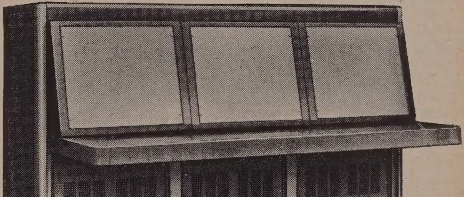
This assembly consists of No. PR-6724-A Rack, a pair of No. RS-624-A Detachable Side Panels, a rack mounted Sloping Panel No. SP-1719, and an Extension Table No. RX-119. All of these units are modular and can be extended in multiple groups. They are available in various heights for panels 19", 24", and 30" wide.



To provide a fresh, compact appearance to our Series PR, FR, PX, and FX Racks, the front of the rack is completely framed as illustrated above.



The duplex unit shown above has two No. PR-8424-A racks, a pair of No. RS-824-A detachable side panels, two sloping panels—No. SP-1719, and an extension table No. RX-219. The same assembly can be made as a single unit or a multiple row, as all units are modular, and are available as 19", 24", and 30" panel widths.



This desirable low console assembly consists of these standard Par-Metal units: three No. PL-4824 racks, a pair of RL-424 detachable side panels, three No. SP-1719 sloping panels, and one RX-319 extension table. Any panels listed on Par-Metal Pages 20 and 21 may be substituted for the ventilated panels shown at the bottom.

PAR-METAL UNIVERSAL CABINET RACKS

DETAILS OF CONSTRUCTION AND ASSEMBLY

RACK CONSTRUCTION:

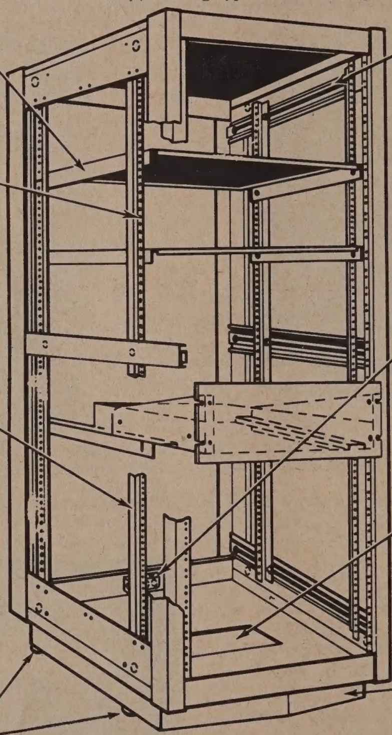
The frame shown is used on series "FL", "FR", "PL", and "PR" racks. The top and bottom is made from 7/64″ steel. The four uprights are also 7/64″ steel, and have multiple-formed angle bends to insure rigidity. Series "PX" and "FX" racks are similar, except that the solid side walls are made from 1/16″ steel. The entire assembly is securely welded to form an integral unit.

DOORS:

For sake of clarity, doors are not shown on the frame drawing. They are stamped from one piece of 1/16″ steel, and "dutch formed" on all sides providing smooth double-thick edges. Adequate ventilation is obtained from full ventilating (venetian-type) louvers. Short doors for fan or blower installations are available.

DOOR HARDWARE:

Door hinges are slip type to permit easy removal. Die cast, chrome plated handles are equipped with cam latches for door closures. Lock type handles are supplied on racks with both front and rear doors. Non-locking handles are used on racks with rear doors only; locking type handles are optional.



● **SIDE MOUNTING BRACKET:**

These may be used separately or with shelves as shown. Slotted holes on the brackets provide any vertical adjustment required.

● **PANEL MOUNTING ANGLES:**

They are made from 1½″ x 1½″ x 3/16″ thick structural steel. All holes are die punched to provide accurate spacings with close tolerances; holes are tapped 12/24 thread on 1½″-¼″ alternate spacings for standard rack panels. Additional angles may be purchased for mounting terminal blocks or other devices.

● **VERTICAL SIDE SUPPORTS:**

These supports are fastened to the same bolt retainer rails used for securing the panel mounting angles. Holes on ⅝″—⅝″—½″ alternate centers, tapped 10/32 thread, provide maximum adjustment for side mounting brackets and equipment shelves. They may also be used for attaching slides or other custom made brackets. The supports are made from 7/64″ thick steel, locked in place with ⅜″ diameter screws, lock washers and hexagon nuts, to afford maximum support.

● **FLOOR LEVELERS:**

Four are supplied with all universal type racks.

● **BOLT RETAINER RAILS:**

To these are bolted the panel mounting angles and vertical side supports, which may be located at any position from front to back. These rails are made from 7/64″ steel, and are rigidly welded in place. Angles and supports are securely fastened to rails with ⅜″ diam. steel bolts, lock washers, and hexagon nuts.

● **OUTLETS:**

"Knockout holes" are available on cabinet side for connecting cables; a duplex outlet, outlet box and plate are mounted on cabinet under rear door.

● **ACCESS OPENING:**

Opening in bottom is 4″ x 14″ on 19″ panel racks; 4″ x 19″ on 24″ panel racks; 4″ x 25″ on 30″ wide panel racks.

● **RECESSED SUB-BASES:**

They are available for all universal type racks as an optional accessory (see PAR-METAL Page 8 for listing and description).

FRONT VERTICAL CORNER AND JOINING TRIMS:

In previous catalogs, wide corner trims were listed as standard on our universal racks. They overlapped the side edges of the rack panels to conceal the panel mounting screws. This type of trim was not suitable where sliding shelves, sliding drawers, extension desk tables, sloping panels and similar equipment were mounted on the rack.

Since such shelves, drawers, etc., are now being used on the majority of racks purchased from us, we will now supply as standard a "narrow type" corner trim which does not interfere with the use of these accessories. The wider trims mentioned in the first sentence will be supplied on Type "PR" and "PX" racks where so specified.

Supports are fastened to grooved bolt retainers which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are *drilled* and *tapped vertically* to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices.

When installed in racks for 19" wide panels, the clearance between supports (from right to left) is 17¾". On 24" wide panel racks, the clearance is 22¾"; on 30" wide panel racks, the clearance is 28¾". Supports are 2⅝" wide and 1½" deep.

Supports are made from ⅛" steel, finished in aluminum enamel. Each set is supplied with necessary bolts for rack mounting.

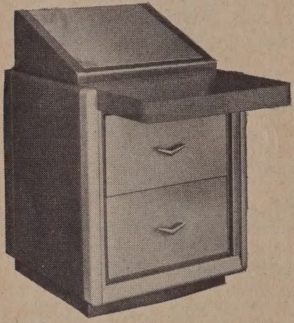
PAR-METAL DE LUXE CONSOLE ASSEMBLIES

General Description

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

While it is obvious that no particular fixed design can serve every requirement, *we have devised a group of standard units,* the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. Our previous models have been functionally redesigned and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.

The *versatile pedestal racks* are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our type "PL" cabinet racks listed on PAR METAL page 5. This would include panel mounting angles. which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are *solidly built* to withstand heavy strains *whether in a laboratory or a moving vehicle.*



SINGLE UNIT ASSEMBLY

The *new side panels* are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws — no metal screws or clips are used.

Our standard finish is a combination of light and dark gray hammertone enamel. Your desk requirements are easily selected from the group charts on PAR-METAL page 12. For the turret, you may choose from four types of control cabinets listed on PAR-METAL page 15.

Other standard finishes including primer coat only are optional without additional cost.

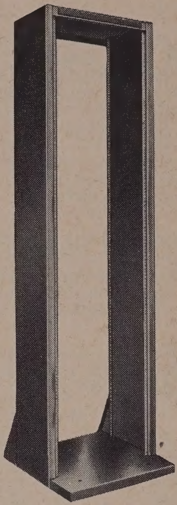
DE LUXE TYPE CHANNEL RELAY RACKS



No. RR-197

OUR DELUXE CHANNEL TYPE RELAY RACK extends the utility and versatility of the standard channel relay rack. The panel space has been changed to 77" high to match a standard height used on enclosed cabinet racks. Side assembly screws are countersunk, so that racks may be readily installed in rows or groups.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. Edges of panels are not exposed.

The rack is drilled and tapped for 10-32 screws **at both front and back** permitting the optional use of either standard rack panels, or dish type chassis at front and back. The **full** space of 77" high is available on the front and back.

The clear distance between panel mounting flanges (from front to back) is 6¾". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on PAR METAL Page 23. When such chassis are mounted at back, the addition of standard or hinged type panels (see PAR METAL Page 21) will make a rack enclosure with a clear depth of 6¾". Top cross-brace is provided with a grille for ventilation where needed.

All parts of this rack are made from 7/64" steel. Top brace and vertical channel members are securely welded together. Base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

"W" SERIES

EXPAND-A-RACK SERIES

DESCRIPTION:

A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
B. Figure "A" shows two Expand-A-Racks joined together.
C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

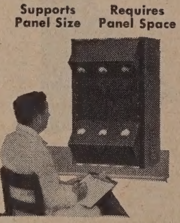
SLOPING PANEL SUPPORT

In answer to many requests from engineers within the industry, WYCO METAL PRODUCTS presents the all-new SLOPING PANEL SUPPORT. The SLOPING PANEL SUPPORT allows for mounting of the standard 19″ panel in sloping position. This enables the engineer or equipment user to more easily view the rack mounted instrument panel. From this illustration, it is easy to see that the SLOPING PANEL SUPPORT offers a variety of positions in which a standard 19″ panel may be supported in sloping position. The SLOPING PANEL SUPPORT is fabricated of heavy gauge steel and is finished in Black and Grey Wrinkle or Silver Grey Hammertone.



IMPORTANT! When ordering SLOPING PANEL SUPPORTS FOR CABINET RACKS THAT HAVE FRONT CORNER VERTICAL TRIM, use catalog Prefix "B". In all other cases use catalog Prefix "G."

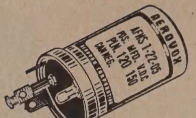
ELECTROLYTICS



TYPE AFH (85°C)

Twist-Prong Electrolytic Capacitors

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong electrolytic capacitors with the very latest refinements . . . 85°C operation; improved moisture resistant sealing; special Types AFHS and PWHS for high ripple current circuits; high-purity aluminum foil construction throughout; either etched or composite-plate depending on electrical requirements. Types PWH and PWHS are special construction for printed wiring.

For use over a wide temperature range with minimum change in capacitance. Designed for filter audio bypass applications in radio-TV and amplifier equipment.

While AFH electrolytics enjoy a tremendous papularity as replacement capacitors for TV receivers, they are rapidly gaining acceptance in many industrial applications.

Capacity tolerances and surge voltage are as listed in EIA Specification No. RS-154.

ELECTROLYTIC CAPACITY TOLERANCES:

0- 50 Volts	—10 +250%
51-350 Volts	—10 +100%

Metal Can Tubular Electrolytic Capacitors

TYPE PRS-AC (AC rated units)

NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.

Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP-PRS) for replacement use in cross-over networks and color TV receivers. Also listed are Types PRSB — separate section, dual units for use in specialized applications.

Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.

Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 3/16" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.

Tolerance and surge voltage are in accordance with EIA Specification RS-154.

TYPE B C D UPRIGHT MOUNTING PLASTIC CASED ELECTROLYTICS

Plastic cased, epoxy end-filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a +(plus) mark on case. Lead space varies with diameter.

TYPES HCB and NPB
High Capacity/Low Voltage Bakelite Cased Electrolytics

Type HCB units are polarized electrolytic capacitors designed for use in industrial applications such as battery eliminators, power supplies, electric fence controls and sound movie projectors. For non-polarized applications in welding and control equipment Type NPB units are available.
Both types feature heavy-duty, moisture resistant bakelite cases which eliminate the need for outer cardboard insulating tubes. Operating temperature range from —40°C to +85°C. Capacitance tolerance up to 150 VDCW —10%+100%, over 150 VDCW —10%+50%. High capacity etched plate construction assures long trouble-free operation. Units supplied with wrap around—footed brackets for vertical mtg.—horizontal mtg. means available on Special Order.

Radial Lead Mounting

Two famous dielectrics . . . quality kraft tissue and Mylar film . . . are combined with Aerolene impregnant and exclusive "Polycap" plastic case to bring you a truly superior bypass capacitor. The advanced construction techniques presented in "Bi-Electric" capacitors offer distinct advantages over other radial lead types. "Polycap" case provides a solid uniform coating from end-to-end. Controlled end-fills provide a sealed protection, and leads cannot crack end-fill or pull-out when leads are extended for axial mounting. Standard capacitance tolerance is ±10%. Operating temperature range is —30°C to +100°C.

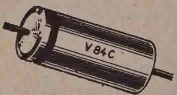
TYPE V84C

AEROFILM (MYLAR*) CAPACITORS



V84C Aerofilm† Tubular Capacitors are high quality units in dense steatite cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C.

These excellent characteristics are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%.

†DURANITE
Duranite Blue Moulded Tubular Capacitors

Toughest capacitors ever offered for radio-electronic equipment, DURANITE capacitors. Design, impregnant, processing, and casing insure glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof; operate from sub-zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf. A white band around one end of the capacitor identifies the outside foil.

†"AUTOPASS" Vertical Mounting Plastic-Cased Paper Capacitors

Aerovox Type P151N capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space.

Aerolene impregnated and assembled into a molded phenolic case, Type P151N capacitors are then sealed with a thermo-setting end-seal. The end-seal surface is below the outside edges of the plastic case, permitting the capacitor to be mounted flush against the mounting surface. The leads of these capacitors are stiff, and critical spacing is closely held to facilitate their use in mechanized assemblies. Outside foil is identified by wire lead nearest to edge of case or by a paint stripe on the case nearest the outside foil.

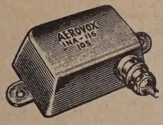
R-F NOISE CAPACITANCE SUPPRESSORS



BYPASS
INA-116, INA-117, INA-118

These radio-noise suppression capacitors have been especially designed for use in aircraft, vehicular and industrial electric and electronic fields.

Primary application of the INA-116, INA-117, and INA-118, is as r-f bypass capacitors from line to ground in low voltage DC supply lines. These units are rated at full 150 VDC over temperature range of —55°C. to +71°C. and 60 VDC from —55°C. to +95°C.

Types INA-218, INA-219, INA-220 and INA-221 are feed-thru capacitors in which the effective section inductance is minimized by the so-called "duct-type" design. Significant reductions can often be realized in size, weight and in some instances, overall cost by the use of feed-thru capacitors as compared to the conventional r-f suppression filter designs. The feed-thru capacitors listed below may be used with good characteristics to 1000 megacycles. Operating temperature range is —55°C. to +85°C.

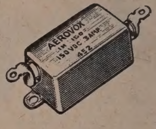
UHF-INTERFERENCE FILTERS



These latest filter units provide maximum attenuation from 150 KC well up into the UHF range. And they are extra-rugged, extra-compact, extra-efficient, by any comparison with previous filters.

Primary applications are in r.f. noise suppression work in military or commercial aircraft and for vehicular low-voltage DC applications. Also, for special applications such as battery or low-voltage DC filters, for shield room applications, and for critical equipment.

Available in seven standard types meeting a wide variety of applications. For extraordinary requirements, special filters can be developed and built to your order.

BUILT-IN FILTERS

High attenuaton type, hermetically sealed units for use where severe interference is encountered and dependability is required. For permanently mounted applications. Aerovox special "Pi type" construction insures efficient radio noise reduction over low frequency broadcast shortwave, and television bands. Suitable for Army-Navy or aircraft equipment where immersion and severe humidity tests must be met.

For single wire unbalanced applications. For two filtering use one filter in each line. Filter case must be securely bonded to the filter appliance and ground for maximum efficiency. These filters when used on high voltage AC should be used only on permanently grounded equipment.

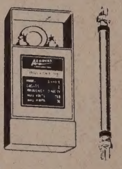
IN 111	250 VAC	10	2" x 2" x 1¼"
IN 112	250 VAC	30	3 1/16" x 2⅛" x 2⅞"

SCREEN ROOM FILTERS



Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for ¾" and 1" conduit.

1¼" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

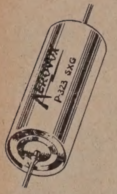
PAPER SUB-MINIATURES



Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10°C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Types P123S and P123SX are rated for operation over a temperature range of —65°C. to +100°C. Types P323S and P323SX are rigidly processed to assure operation over the temperature range of —65°C. to +125°C. The capacitor sections on types P123S and P323S utilize an inserted tab construction to obtain minimum size. Types P123SX and P323SX utilize extended foil construction for those applications where operation is required at very low AC voltages.

All values are available in ±10% or ±20%.

TYPES CP53, CP54, CP55 — Characteristic E

Oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is ±10% (K), on multiple section units +20 —10% (V).

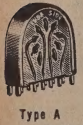
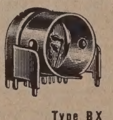
**RIGHT ANGLE TUBE SOCKETS



Type A

Type AX

Type B



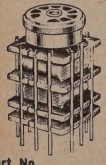
Type BX

Ordering Example: RA7A = (Type A 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-fatiguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thickness.

Type A — for general purpose applications.
Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
Type B — same as Type A except tube shield shell added.
Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket. RA 9 — 9 pin right angle tube socket



**MODULIZED STANDARD CIRCUITS

Modules are comprised of uniformly standard, stacked steatite wafers combining the required resistive, capacity and inductive components to form a completely reliable, ruggedly compact electronic circuit.

Based on a study conducted by the National Bureau of Standards, the modules listed below were chosen as representative of circuits appearing in both military and commercial equipment. In all cases, similar functional circuits have been in use for at least 10 years without major improvement. Accessories, such as the twelve position bread board*, the individual module mounting socket† and mounting socket and banana plugs are available to facilitate the inter-connecting of standard circuit modules to form complete electronic sub-assemblies.

CEROL®

HI-Q CERAMIC CAPACITORS

HIGH CAPACITY, HIGH RELIABILTY, ROLLED CERAMIC CAPACITORS

CEROL capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating temperature range at 100 VDC —55°C to 85°C and at 50 VDC —55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015B.

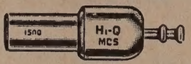
STAND-OFF CAPACITORS

TYPE MCS



TYPE CS

Hi-Q stand-off capacitors have a screw fixture for mounting to the chassis or common ground. All units are coated with a high temperature enamel, stamped with capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes. All units are flash tested at 1250 volts D.C. The power factor is under 3% and the insulation resistance is above 7500 megohms.

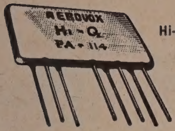
Hi-Q PLATE ASSEMBLIES



Hi-Q plate assemblies offer many distinct advantages:

1. Several components replaced by one.
2. Saves installation time — fewer connections.
3. Saves space by combining components into one compact unit.
4. Improved circuit stability.

Plate assemblies are combinations of resistor-capacitor networks in one rugged miniature unit. 'Manufactured with high dielectric base plates and covered with a Durez moisture-proof coating and impregnated with low-loss microcrystalline wax. Simplifies assembly and gives dependable service. Widely used in radio and TV applications.

TYPES 1468LS-HV and 1467LS-HV

Designed especially for television, low power transmitters and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished to meet characteristic B of the Mil specification. Standard Tolerance is plus and minus 20% and they are tested to meet EIA standards. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

Potted Transmitting Capacitors

These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

Stack-Mounting Transmitting Capacitors

These stack-mounting transmitting mica capacitors are especially intended for various applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installations. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

DIPPED, SILVERED MICA CAPACITORS
TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5A Test Standards for molded mica capacitors, these unique dipped-mica units offer the following outstanding features:

• High operating temperatures —55°C to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5A. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 megohms at 125°C.

Capacitors will be marked with capacity and tolerance. In addition voltage rating will be marked on all units other than 500 volts rating.

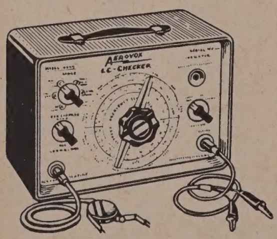
AEROVOX L-C CHECKER—MODEL 97



The Aerovox Model 97 L-C Checker is a highly versatile test instrument capable of testing capacitance in circuit **without removing either lead of the capacitor from the circuit.**

The new Model 97 has been completely redesigned and engineered according to the latest design theories and utilizes the newest techniques of printed-circuitry to achieve the most efficient instrumentation available today to servicemen and technicians. The L-C Checker represents the ultimate in versatility and adaptability in a test instrument.

Some of the features of the Model 97 L-C Checker include: extended frequency range from a minimum of 74 kc to a maximum of 44 megacycles; a recessed front panel with an extra-large, easy-to-read dial with magnifying indicator. Finished in an attractive smooth grey, the instrument weighs only 8½ pounds and measures 13" x 8½" x 6" deep and comes furnished with all necessary test cords and probes.

A partial listing of the applications of the Model 97 L-C Checker includes:

1. Checking capacitors in circuit for values of capacitance and relative Q at radio frequency.
2. Checking capacitor insulation resistance (leakage).
3. Checking alignment of radio frequency and intermediate frequency circuits of domestic, marine, and short-wave receivers.
4. Tracking super-het oscillators.
5. Checking alignment of FM-I.F. channels and independent alignment of FM-I.F. transformers.
6. Checking resonant absorption troubles in "all wave" receiver circuits, locating dead spots, etc.
7. Location of resonant points in shorted windings (unused coils) in multi-range oscillators, etc.
8. Checking natural resonant points of r.f. chokes to make sure they are beyond circuit operating range.
9. Checking natural period of antennae and transmission lines.
10. Checking quartz crystals for true or false frequency, operation at harmonics and activity.
11. Checking transmitter buffer, amplifier and tank circuits for parasitic current loops with power off for safety.
12. Tuning of wave traps and filters for harmonic supression.

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; Just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to RMA Standards. All units are wax-dipped for protection against salt water immersion.

SCDM15 capacitors are units which have been given a single protective resin coat rather than the full series of dips to which standard units are subjected. There is a marked difference in size of these thin-coated capacitors, but there is a sacrifice in moisture resistance as a result. SCDM15 units are therefore recommended for applications requiring extreme miniaturization such as military and transistor filter, networks, and delay lines. However, for long term high reliability of operation, the capacitors should receive additional environmental protection such as encapsulation, circuit potting, or hermetic sealing.

HIGH VOLTAGE DUR-MICA

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.

The Dur-Mica design provides advantage of higher temperature operation (125° C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.

All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

DIPPED MYLAR*—PAPER (Elmenco type MPD)

The new Elmenco Type MPD (ARCO dp) capacitors are dip-coated tubular Mylar*-paper dielectric capacitors. They represent a double breakthrough in capacitor design by combining missile and computer quality with commercial radio-TV cost. The "dp" series is designed for near universal use from TV by-pass to critical industrial applications requiring stringent electrical and environmental characteristics. New high levels of ruggedness, stability, and reliability have been achieved, yet these new Elmenco capacitors are miniaturized for transistor circuitry.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 110°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.
